Everygirl's Magazine ... Rowe Wright,C Francis Loomis,Marta K. Sironen,1928 The Enjoyment and Use of Color Walter Sargent,1923 The Architectures of Childhood Roy Kozlovsky,2016-03-16 Between 1935 and 1959 the architecture of childhood was at the centre of architectural discourse in a way that is unique in architectural history Some of the seminal projects of the period such as the Secondary Modern

School at Hunstanton by Peter and Alison Smithson Le Corbusier's Unit d'Habitation at Marseilles or Aldo van Eyck's playgrounds and orphanage were designed for children At CIAM architects utilized photographs of children to present their visions for reconstruction The unprecedented visibility of the child to architectural discourse during the period of reconstruction is the starting point for this interdisciplinary study of modern architecture under welfare state patronage Focusing mainly on England this book examines a series of innovative buildings and environments developed for children such as the adventure playground the Hertfordshire school the reformed children hospital Brutalist housing estates and New Towns It studies the methods employed by architects child experts and policy makers to survey assess and administer the physiological emotional and developmental needs of the user the child It identifies the new aesthetic and spatial order permeating the environments of childhood based on endowing children with the agency and autonomy to create a self-regulating social order out of their own free will while rendering their interiority and sociability observable and governable By inserting the architectural object within a broader social and political context The Architectures of Childhood situates post-war architecture within the welfare state's project of governing the self which most intensively targeted the citizen in the making the children Yet the emphasis on the utilization of architecture as an instrument of power does not reduce it into a mere document of social policy as the author uncovers the surplus of meaning and richness of experience invested in these environments at the historical moment

Bates,2011-03-23 Enameling on metal is not difficult It is an exacting art which demands careful attention to such details as cleaning application and firing but it cannot be called hard to do In my opinion a technical process such as enameling becomes as easy or hard to do as the one doing it makes it for himself If one proposes to be an artist he never considers such an ambiguous term but works with only one idea in mind that is to finish to his own satisfaction the present piece of work so that he may be released to start the next There can be no termination to art endeavor for especially after finishing an enamel there are always variations of color texture and motif which come to one s mind The process of making and firing an enamel therefore constitutes a truly creative activity *The Rainbow Spirit in Creation* Jasmine Corowa,2000 Identifying God the Creator with the Rainbow Spirit Aboriginal Christians see in Christ the incarnation of the Rainbow Spirit in human form In *The Rainbow Spirit in Creation* the Rainbow Spirit Elders share the story of the creation of the land with colorful illustrations that show the Rainbow Snake as part of the seven days of creation offering a new interpretation of the Aboriginal culture and a view of the Creator Spirit as within the earth not apart from it

The Nature Handbook Ernest H. Williams Jr., 2005-05-19 Nature is full of fascinating stories, stories that attract our attention at a young age and keep us amazed throughout our entire lives. The need to understand nature draws us back to its simple beauty again and again yet underneath this simplicity lies a complex web of associations and patterns. *The Nature Handbook* does what no other field guide does: explores and explains nature through these connecting patterns, revealing them to the many different types of nature lovers. All naturalists, from birders to gardeners, hikers to environmentalists, wildflower enthusiasts to butterflyers, will appreciate the different approach of the Handbook even those whose interest in the natural world is just beginning to develop. Naturalists who are already well versed in one group of organisms, birders for example, will find new explanations and patterns for their favorite group as well as new patterns all around them that they had previously overlooked. Observations in the Handbook are arranged in the three main sections of plants, animals, and habitats. These sections are then connected through discussions of the relationship of size and shape, adaptations, distribution, patterns, behavior, and diversity of life. Since the emphasis is on patterns rather than individual species, each chapter has cross references to related topics. For example, tree-related topics such as leaf shape, treelines, and fall colors are all discussed in different chapters even though they are related. Leaf shape is associated with trees as organisms and therefore is in Chapter 2. Trees, treelines, are most associated with mountains so their description is in Chapter 8. Mountains, fall colors, apply more broadly to forests than to individual trees and they are discussed in Chapter 9. Forests. Approximately 500 color photographs help make the more than 200 patterns apparent and recognizable for readers and each pattern is accompanied by a detailed description and a brief list of sources. The book is designed to invite browsing and readers will gain a rich ecological perspective and insight. Curiosity about the world around us is a basis for human learning. *The Nature Handbook* serves to aid all nature lovers in their quest for understanding the many stories that our living world provides.
