Spatial Distribution of Energy Deposited by Atomic Particles in Elastic Collisions K. B. Winterbon, Peter Sigmund, J. B. Sanders, 1970 **Spatial distribution of energy deposited by atomic particles in elastic collisions** K. B. Winterben, Peter Sigmund, J. B. Sanders, 1970 **Energy Deposition for High-Speed Flow Control** Doyle D. Knight, 2019-02-21 Written by a leading expert in the field this book presents a novel method for controlling high speed flows past aerodynamic shapes using energy deposition via direct current DC laser or microwave discharge and describes selected applications in supersonic and hypersonic flows Emphasizing a deductive approach the fundamental physical principles provided give an understanding of the simplified mathematical models derived therefrom These features along with an extensive set of 55 simulations make the book an invaluable reference that will be of interest to researchers and graduate students working in aerospace engineering and in plasma physics **Ion Implantation in Semiconductors and Other Materials** Billy Crowder, 2013-03-13 During the years since the first conference in this series was held at Thousand Oaks California in 1970 ion implantation has been an expanding and exciting research area The advances in this field were so rapid that a second conference convened at Garmisch Partenkirchen Germany in 1971 At the present time our understanding of the ion implantation process in semiconductors such as Si and Ge has reached a stage of maturity and ion implantation techniques are firmly established in semiconductor device technology The advances in compound semiconductors have not been as rapid There has also been a shift in emphasis in ion implantation research from semiconductors to other materials such as metals and insulators It was appropriate to increase the scope of the conference and the IIIrd International Conference on Ion Implantation in Semiconductors and Other Materials was held at Yorktown Heights New York December 11 to 14 1972 A significant number of the papers presented at this conference dealt with ion implantation in metals insulators and compound semiconductors The International Committee responsible for organizing this conference consisted of B L Crowder J A Davies F H Eisen Ph Glotin T Itoh A U MacRae J W Mayer G Dearnaley and I Ruge The Conference attracted 180 participants from twelve countries The success of the Conference was due in large measure to the financial support of our sponsors Air Force Cambridge Research Laboratories and the Office of Naval Research **X-Ray Spectrometry** Kouichi Tsuji, Jasna Injuk, René Van Grieken, 2005-08-19 X Ray Spectrometry Recent Technological Advances covers the latest developments and areas of research in the methodological and instrumental aspects of x ray spectrometry Includes the most advanced and high tech aspects of the chemical analysis techniques based on x rays Introduces new types of X ray optics and X ray detectors covering history principles characteristics and future trends Written by internationally recognized scientists all of whom are eminent specialists in each of the sub fields Sections include X Ray Sources X Ray Optics X Ray Detectors Special Configurations New Computerization Methods New Applications This valuable book will assist all analytical chemists and other users of x ray spectrometry to fully exploit the capabilities of this set of powerful

analytical tools and to further expand applications in such fields as material and environmental sciences medicine toxicology forensics archaeometry and many others Nuclear Science Abstracts ,1976 **Calorimetry In High Energy Physics - Proceedings Of The Third International Conference** James L Siegrist,Phyllis Hale,1993-08-30 *Scientific and Technical Aerospace Reports* ,1970 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database *Thermoluminescence & Thermoluminescent Dosimetry* Yigal S. Horowitz,2020-04-28 First Published in 1984 this set offers a comprehensive insight into thermoluminescence Carefully compiled and filled with a vast repertoire of notes diagrams and references this book serves as a useful reference for radiobiologists and physicists and other practitioners in their respective fields **Atomic Collisions in Solids** Sheldon Datz,B. R. Appleton,C. D. Moak,2013-11-21 Perhaps the most controversial aspect of this volume is the number V assigned to the conference in this series Actually the first conference to be held under the title Atomic Collisions in Solids was held at Sussex University in England in 1969 and the second at Gausdal Norway in 1971 which would logically make the conference held at Gatlinburg Tennessee U S A in 1973 the third III However the appearance of the proceedings of the 1971 Gausdal Conference published by Gordon and Breach bore the number IV The reasoning behind this was that in fact two previous conferences had been organised dedicated to the same subject area The first of these Was at Aarhus Denmark in 1965 and the second in 1967 was held in Chalk River Canada Hence the number V for the 1973 meeting Actually the conference can easily be traced back to Paris France in 1962 when it went under the co-sponsorship of the Comite International In 1962 a symposium conference was held at Oak Ridge Tennessee U S A at which the discovery of channeling was first formally announced This was followed by conferences at Chalk River Canada in 1963 and at Harwell England in 1964 More over immediately following the Chalk River conference in 1967 there was a conference on higher energy collisions at Brookhaven New York U S A Thus strictly speaking the Gatlinburg meeting is the tenth X in the series *Radiation Effects on Polymers for Biological Use* Henning Kausch,2003-04-23 Biomaterials repair reinforce or replace damaged functional parts of the human body All mechanical and biological interactions between an implant and the body occur across the interface which has to correspond as nearly as possible to its particular function Much of the progress in adapting polymer materials for use in a biological environment has been obtained through irradiation techniques For this reason the most recent developments in four key areas are reviewed in this special volume 1 the analysis of the topology and the elemental composition of a functional surface 2 the chemical modification of the surface which results in highly pure sterile and versatile surfaces 3 the sterilisation of implantable devices via ionising radiation and its possible effects on the structural mechanical properties of polymers and 4 the radiation effects on living cells and tissues which are of particular importance for radiation protection and radiotherapy **Energetic Charged-Particle Interactions with Atmospheres and Surfaces** Robert E. Johnson,2013-03-13 On attending a

conference on the Jovian satellites at UCLA I heard Lou Lanzerotti vigorously present the exciting data on the sputtering of water ice by MeV protons taken with W L Brown at AT T Bell Labs In his inimitable way he made clear that this new electronic sputtering process was very poorly understood and was very important for surface properties of satellites I was immediately hooked and have been working ever since with Lanzerotti Brown my colleague at Virginia John Boring and Bo Sundqvist at Uppsala on understanding the ejection of material from surfaces and applying laboratory results to interesting planetary problems In the course of writing this book I also had the benefit of spending a semester with the Planetary Geosciences group in Hawaii thanks to Tom McCord a period of time with Doug Nash at JPL and a period of time with the group at Catania The book was started with the encouragement of Lou Lanzerotti The writing has gone slowly as the field has been changing rapidly Even now I feel it is incomplete as the interesting Halley dust data have just recently been interpreted in detail Voyager has recently visited Neptune and the data on Pluto are rapidly improving However most of the principles for plasma ion alteration of surfaces and gases have been established allowing I hope a coherent and useful framework for incorporating both new laboratory and planetary data

Techniques and Concepts of High-Energy Physics VIII Thomas Ferbel, 2012-12-06 For the eighth Advanced Study Institute ASI on Techniques and Concepts of High Energy Physics we returned once again to the Hotel on the Cay on that speck of land in the harbor of Christiansted St Croix U S Virgin Islands This time the ASI brought together a total of 73 participants from 21 countries The primary support for the meeting was provided as usual by the Scientific Affairs Division of the North Atlantic Treaty Organization NATO The ASI was cosponsored by the U S Department of Energy by the Fermi National Accelerator Laboratory Fermilab by the U S National Science Foundation and by the University of Rochester A special contribution from the Oliver S and Jennie R Donaldson Charitable Trust provided an important degree of flexibility as well as support for worthy students from developing countries In addition the International Science Foundation contributed very generously to the support of a participant from Russia As in the case of the previous ASIs the scientific program was designed for advanced graduate students and recent PhD recipients in experimental particle physics The present volume of lectures although unfortunately short of three contributions should complement the material published in the first seven ASIs and prove to be of value to a wider audience of physicists It is a pleasure to acknowledge the encouragement and support that I have continued to receive from colleagues and friends in organizing this meeting

Energy Research Abstracts ,1979 **Nuclear Radiation Transfer and Heat Deposition Rates in Liquid Hydrogen** Martin Omar Burrell,1962 *Physical and Chemical Mechanisms in Molecular Radiation Biology* William A. Glass,Matesh N. Varma,2012-12-06

The fundamental understanding of the production of biological effects by ionizing radiation may well be one of the most important scientific objectives of mankind such understanding could lead to the effective and safe utilization of the nuclear energy option In addition this knowledge will be of immense value in such diverse fields as radiation therapy and diagnosis and in the space program To achieve the above stated objective the U S Department of Energy DOE and its predecessors embarked upon a fundamental interdisciplinary research program some 35 years ago A critical component of this program is the Radiological and Chemical Physics Program RCPP When the RCPP was established there was very little basic knowledge in the fields of physics chemistry and biology that could be directly applied to understanding the effects of radiation on biological systems Progress of the RCPP program in its first 15 years was documented in the proceedings of a conference held at Airlie Virginia in 1972 At this conference it was clear that considerable progress had been made in research on the physical and chemical processes in well characterized systems that could be used to understand biological effects During this period of time most physical knowledge was obtained for the gas phase because the technology and instrumentation had not progressed to the point that measurements could be made in liquids more characteristic of biological materials
