*Spatial Ecological-Economic Analysis for Wetland Management* Jeroen C. J. M. Bergh,Aat Barendregt,Alison J. Gilbert,2012-07-19 World wetlands are endangered by human activities and development in all parts of the world This book approaches the study of wetlands management and development policy by using integrated ecosystem modelling that draws on insights from hydrology ecology and economics The authors devote particular attention to the spatial dimension the development of a set of complementary indicators and the aggregation and evaluation of information

Spatial Ecological-Economic Analysis for Wetland Management Jeroen C. J. M. Bergh,Aat Barendregt,Alison J. Gilbert,2004-06-10

Wetlands are very sensitive and valuable ecosystems that are subject to much stress from human activities The study presented here has developed an innovative triple layer framework for analysis of wetland management This approach provides support for spatial matching between physical planning hydrological and ecological processes and economic activities The authors describe how integrated modelling at the regional scale can be achieved in practice Following an introduction to wetlands theoretical aspects of the contributing disciplines are discussed as well as various aspects of integrated and spatial modelling An applied integrated assessment of spatial wetland management for the Vecht area between Amsterdam and Utrecht is then presented This assessment has resulted in a set of linked hydrological ecological and economic models formulated at the level of grids and polders and various types of evaluations and rankings of scenarios

The results indicate the value of maintaining spatial detail for as long as possible

Bioeconomic Modelling and Valuation of Exploited Marine Ecosystems J.C.J.M. van den Bergh,J. Hoekstra,R. Imeson,P.A.L.D. Nunes,A.T. de Blaeij,2006-06-19

Economic dimensions have been somewhat neglected in research on nature policy and management of marine ecosystem exploitation The current book aims to ll this gap It examines the mismatches of natural socio economic and regulatory processes and regimes in time and space This involves dealing with the complexity and uncertainty that are inherent to the interaction of marine ecosystems and economic systems The approach adopted is based on the idea that the design of sustainability policies requires an integration of insights from resource environmental and ecological economics on the one hand and marine biology and environmental sciences on the other hand For this purpose use is made of integrated assessment on the basis of theoretical and applied mathematical models The book is the result of a large project hosted by the Department of Spatial Economics of the Free University in Amsterdam under the supervision of the rst author The project received funding from the Netherlands Organisation for Scientific Research NWO through a priority program titled Sustainable Use and Conservation of Fine Living Resources which was initiated and coordinated by Prof Wim Wolff of the University of Groningen The work reported here has greatly bene ted from external advice given by marine biologists who participated in this research program
