Spatial Data Analysis In The Social And Environmental Sciences:

Spatial Data Analysis in the Social and Environmental Sciences Robert P. Haining, Robert Haining, 1993-08-26 A spatial data set is a data set in which each observation is referenced to a site or area Within both the social and environmental sciences much of the data collected is within a spatial context and requires statistical analysis for interpretation The purpose of this book therefore is to describe to students and research workers in the social and environmental sciences the current methods available for the analyses of spatial data Methods described include data description map interpolation exploratory and explanatory analyses The book also examines how spatial referencing raises a distinctive set of issues for the data analyst and recognizes the need to test underlying statistical assumptions Further methods for detecting problems assessing their seriousness and taking appropriate action are discussed *Spatially Integrated Social Science* Michael F. Goodchild, Donald G. Janelle, 2004-01-15 Spatial analysis assists theoretical understanding and empirical testing in the social sciences and rapidly expanding applications of geographic information technologies have advanced the spatial data gathering needed for spatial analysis and model making This much needed volume covers outstanding examples of spatial thinking in the social sciences with each chapter showing some aspect of how certain social processes can be understood by analyzing their spatial context The audience for this work is as trans disciplinary as its authorship because it contains approaches and methodologies useful to geography anthropology history political science economics criminology sociology and statistics SPARC 12 Proceedings University of Salford, 2013-08-13 These proceedings bring together a selection of papers from the 2012 Salford Postgraduate Annual Research Conference SPARC They reflect the breadth and diversity of research interests showcased at the conference at which over 130 researchers from Salford the North West and other UK universities presented their work 21 papers are collated here from the humanities arts social sciences health engineering environment and life sciences built environment and business GIS And Health Anthony Gattrell, M Loytonen, 2003-09-02 The potential users of GIS for health related analysis and applications are legion In this edited collection there are extensive examinations of appropriate methodologies for spatial analysis and spatial statistics in analyzing health data Chapters explore the links with GIS and consider some of the assumptions and problems associated with such analyses A range of chapters explore the associations between for example air pollution and ill health and between pesticide exposure and disease risk The book also covers statistical and cartographic methods for analyzing data for small areas and methods for health assessment needs **A Century of British Geography** Ron Johnston, Michael Williams, 2022-09-11 These essays trace the evolution of British geography as an academic discipline during the last hundred years and stress how the study of the world we live in is fundamental to an understanding of its problems and concerns Never before has such an ambitious and wide ranging review been attempted and never before has it been done with so much knowledge and passion The principal themes covered in this volume are those of environment place and

space and the applied geography of map making and planning The volume also addresses specific issues such as disease urbanization regional viability and ethics and social problems This lively and accessible work offers many insights into the minds and practices of today's geographers

change residence do not settle in the same places as immigrants Separate Destinations argues that these distinct mobility patterns coupled with record levels of immigration from impoverished third world nations are balkanizing the American electorate James G Gimpel examines the consequences of different patterns of movement and settlement on the politics of the communities in which these different groups settle Newer immigrants are constrained by a lack of education money English literacy and information and frequently by discrimination to live in areas of coethnic settlement Domestic native born migrants predominantly Caucasian free of discrimination and possessing more money and information move where they wish often to communities where immigrants are not welcome or cannot afford to live Strong evidence suggests that spatially isolated immigrants are slower to naturalize and get involved in politics than domestic migrants Gimpel looks closely at states with very different patterns of migration and immigration California Colorado Kansas Kentucky Florida Pennsylvania and New York In these states Gimpel shows the impact of population mobility on party registration party votes and voter turnout and asks whether population changes have changed the dominant party in a state or produced a political reaction from natives Separate Destinations contains a number of thematic maps detailing the settlement patterns of internal migrants and immigrants for both counties and census tracts Blending insights from a number of social science disciplines including economics demography sociology political science and anthropology this book will be of interest to a wide and diverse readership of scholars students and policymakers James G Gimpel is Associate Professor of Government University of Maryland

Contemporary Statistical Models for the Plant and Soil Sciences Oliver Schabenberger, Francis J. Pierce, 2001-11-13 Despite its many origins in agronomic problems statistics today is often unrecognizable in this context Numerous recent methodological approaches and advances originated in other subject matter areas and agronomists

frequently find it difficult to see their immediate relation to questions that their disciplines raise On the other hand statisticians often fail to recognize the riches of challenging data analytical problems contemporary plant and soil science provides The first book to integrate modern statistics with crop plant and soil science Contemporary Statistical Models for the Plant and Soil Sciences bridges this gap The breadth and depth of topics covered is unusual Each of the main chapters could be a textbook in its own right on a particular class of data structures or models The cogent presentation in one text allows research workers to apply modern statistical methods that otherwise are scattered across several specialized texts The combination of theory and application orientation conveys why a particular method works and how it is put in to practice About the downloadable resources The accompanying downloadable resources are a key component of the book For each of the main chapters additional sections of text are available that cover mathematical derivations special topics and supplementary applications It supplies the data sets and SAS code for all applications and examples in the text macros that the author developed and SAS tutorials ranging from basic data manipulation to advanced programming techniques and publication quality graphics Contemporary statistical models can not be appreciated to their full potential without a good understanding of theory They also can not be applied to their full potential without the aid of statistical software Contemporary Statistical Models for the Plant and Soil Science provides the essential mix of theory and applications of statistical methods pertinent to research in life sciences **The Urban Fabric of Crime and Fear** Vania

Ceccato,2012-06-21 How does the city s urban fabric relate to crime and fear and how is that fabric affected by crime and fear Does the urban environment affect one s decision to commit an offence Is there a victimisation related inequality within cities How do crime and fear interrelate to inequality and segregation in cities of developing countries What are the challenges to planning cities which are both safe and sustainable This book searches for answers to these questions in the nature of the city particularly in the social interactions that take place in urban space distinctively guided by different land uses and people s activities In other words the book deals with the urban fabric of crime and fear The novelty of the book is to place safety and security issues on the urban scale by 1 showing links between urban structure and crime and fear 2 illustrating how different disciplines deal with urban vulnerability to and fear of crime 3 including concrete examples of issues and challenges found in European and North American cities and without being too extensive also in cities of the Global South
