Spatial Information And The Environment:

Spatial Information and the Environment Peter Halls, 2003-09-02 There is considerable current academic interest in the interface between geographical information systems GIS and the environment This new monograph explores the process from start to finish It begins with information acquisition in the environment and moves on to tool and techniques for manipulating the information visualisation and navigation methods for exploring it and computation and modelling techniques for its analysis It then concludes with a survey of decision support for its application Spatial Information and the Environment is the eighth book in the Innovations in GIS series initiated in 1994 The series is in essence derived from a selection of the presentations made at the annual GIS Research UK conference 2000 held in York and has now changed its focus by concentrating on a single topic making each text distinctive

Spatial Information for Land Use Management Michael J. Hill, Richard J. Aspinall, 2000-11-17 Geographic Information Systems GIS Remote Sensing and environmental modelling are increasingly being used to address land use and land use management issues although much of the development in these applications is based in specific case studies that are not readily accessible to a wide audience Spatial Information for Land Use Management is designed as a reference that provides a description and discussion of the issues involved in the use of spatial information for land use management The chapters include detailed examples of the use of spatial information in land use management The book begins with the technological methods examines applications in a variety of environments and describes the ways in which issues of scale uncertainty linkage of models and GIS and problem solution have been addressed

Spatial Information Technology for Sustainable Development Goals Dilip Kumar, R.B. Singh, Ranjeet Kaur, 2019-08-08 This textbook aims to develop a scientific knowledge base on spatial information technology to communicate the United Nations Sustainable Development Goals SDGs among students researchers professionals and laymen The book improves understanding of the spatial database and explains how to extract information from this for planning purposes To enhance the knowledge of geoscientists and environmentalists the book describes the basic fundamental concepts to advance techniques for spatial data management and analysis and discusses the methodology The Geographic Information System GIS remote sensing and Global Positioning System GPS are presented in an integrated manner for the planning of resources and infrastructure The management of these systems is discussed in a very lucid way to develop the reader's skills The proper procedure for map making and spatial analysis are included along with case studies to the reader Where the first part of the book discusses the conceptual background the second part deals with case studies using these applications in different disciplines The presented case studies include land use agriculture flood watershed characterization and infrastructure assessment for the Sustainable Development Goals

Spatial Information Theory Andrew U. Frank,Irene Campari,1993-09-02 This volume collects the papers presented at the European Conference on Spatial Information Theory COSIT 93 held on the island of Elba Italy inSeptember 1993 Spatial information theory includes disciplinary topics and interdisciplinary issues dealing with the conceptualization and formalization of large scale geographic space It contributes towards a consistent theoretical basis for Geographic Information Systems GIS Geographic information systems are widely used in administration planning and science in many different countries and for a wide variety ofapplications Research results which relevant for GIS are distributed between many disciplines and contacts between researchers have been limited At the same time the development of GIS has been hinderedby the lack of a sound theoretical base This conference was intended to help remedies these problems

The Added Value of Geographical Information Systems in Public and Environmental Health M.J. de Lepper,Henk J. Scholten,Richard M. Stern,2007-07-27 Health for all by the year 2000 is the blueprint for change agreed to by the Member States of the World Health Organization In Europe this blueprint is built on 38 regional targets many of which have the underlying aim of uncovering new knowledge and of using existing knowledge more effectively The targets related to a healthy environment have the ultimate goals of safeguarding human health against environmental hazards and of enhancing the quality of life by providing clean and safe water air food and working and living conditions Allied to these goals is the need to reduce the sense of jeopardy that many people feel about what they perceive as the risks of everyday life These goals are an integral part of the European Charter on Environment and Health adopted by 29 European Member States and the Commission of the European Communities in December 1989 The Charter stresses the shared responsibility of everyone to protect the environment to be given adequate and accurateinformation and to be involved in decision making It outUnes the principles for public policy as well as what needs to be done to transform them into action In this strong information systems have a vital role to play by helping to monitor the effectiveness of measures taken of trends analysed of priorities set and of decisions made

Wetland and Environmental Applications of GIS John G. Lyon,Jack McCarthy,1995-09-18 This new book presents powerful techniques that can be used to address issues and problems related to wetlands and surface waters It is the first book of its kind to address inventory and management of wetlands and water quality problems using GIS and remote sensing technologies Wetland and Environmental Applications of GIS describes a variety of techniques applications and case studies for evaluating wetland and surface water characteristics at the landscape scale The book details wetland and environmentally oriented surface water resource studies using spatial and spectral based technologies such as GIS remote sensing computer modeling and image display Introductory material is included in the first section to provide a common background and to refresh or introduce concepts to the professional The

second section details applications of these technologies in studies of wetlands including the use of GIS and archival satellite data in evaluating and measuring sediment types water depth and environmental change in the coastal wetlands of the Great Lakes The third section addresses various environmental applications of GIS such as locating non point pollution sources and managing oil spills The final section supplies additional information and applications with particular emphasis on potential contributions of remote sensing

GIS in Environmental Engineering Shaheemath Suhara K. K.,A. K. Haghi,2025-02-13 The book covers applications of Geographic Information System GIS and remote sensing in the fields of hydrology water resource management land use rainfall variability and groundwater mapping to help professionals in the field identify change in patterns and guide them in making decisions that promote sustainable development

GIS and Environmental Monitoring Stavros Kolios,Andrei V. Vorobev,Gulnara R. Vorobeva,Chrysostomos Stylios,2017-06-07 This book constitutes a notable contribution to investigate and present the capabilities of Geographic Information Systems GIS and their applicability and usefulness in environmental related applications and sciences The focus is on the design creation development and operation of integrated Web based GIS applications for weather marine and atmospheric environments and the Earth s magnetic field More specifically the aim of this book is to present characteristic applications of GIS to environmental monitoring including GIS solutions for eco mapping sea and port related parameters climate changes and geomagnetic field In the first part of the book the description of every application includes the user requirements the design and development stages performed and the presentation of the final outcome its capabilities and services The Web based applications are developed through different innovative approaches such as cloud GIS and Google Apps for GIS justifying the merit of WebGIS in the world of the environmental applications The second part of the book provides an overview of geomagnetic field parameters and reveals the potential of using GIS for modeling and analyzing of the Earth s magnetic geomagnetic field and its parameters Here the authors present the recently introduced phenomenon called geomagnetic pseudostorm which is modeled and further analyzed here with GIS technology and tools This book appeals to those interested in various areas where spatial information becomes of paramount relevance e g social and economic research and mapping environmental and climate research decision support systems public services and especially for geomagnetic field variations and for the design of warning systems for natural disasters It presents modern methods and approaches to visualize and analyze spatial information using innovative techniques procedures and tools of WebGIS technology In this book the readers find a valuable companion in their efforts to design and develop their own WebGIS applications as it includes useful examples of developing Web GIS applications regarding the monitoring of marine and atmospheric environments as well as applications that deal with meteorological issues and the Earth s magnetic field along with solar activity space weather information This book can also serve as a useful reference source for graduates researchers and professionals related to the areas indicated above

Methods for Handling Imperfect Spatial Information Robert Jeansoulin,Odile Papini,Henri Prade,Steven

Schockaert,2010-10-04 Spatial information is pervaded by uncertainty Indeed geographical data is often obtained by an imperfect interpretation of remote sensing images while people attach ill defined or ambiguous labels to places and their properties As another example medical images are often the result of measurements by imprecise sensors e g MRI scans Moreover by processing spatial information in real world applications additional uncertainty is introduced e g due to the use of interpolation extrapolation techniques or to conflicts that are detected in an information fusion step To the best of our knowledge this book presents the first overview of spatial uncertainty which goes beyond the setting of geographical information systems Uncertainty issues are especially addressed from a representation and reasoning point of view In particular the book consists of 14 chapters which are clustered around three central topics The first of these topics is about the uncertainty in meaning of linguistic descriptions of spatial scenes Second the issue of reasoning about spatial relations and dealing with inconsistency in information merging is studied Finally interpolation and prediction of spatial phenomena are investigated both at the methodological level and from an application oriented perspective The concept of uncertainty by itself is understood in a broad sense including both quantitative and more qualitative approaches dealing with variability epistemic uncertainty as well as with vagueness of terms **GIS for Environmental Decision-Making** Andrew A.

Lovett,Katy Appleton,2007-11-19 Environmental applications have long been a core use of GIS However the effectiveness of GIS based methods depends on the decision making frameworks and contexts within which they are employed GIS for Environmental Decision Making takes an interdisciplinary look at the capacities of GIS to integrate analyze and display data on which decisions Spatial Information Theory A Theoretical Basis for GIS Stephen C. site suitability analysis this book is ideally designed for engineers professionals practitioners upper level students and academics actively involved in the various areas of environmental sciences Mapping the Determinants of Spatial Data Sharing Uta Wehn de Montalvo,2024-11-01 This title was first published in 2003 With the increasing use of GIS in industrialised and developing countries the availability of spatial data has become an issue that affects many public and private sector organisations They are faced with the high cost and substantial effort involved in the generation of spatial data and so the sharing of this data is increasingly being seen as a way of overcoming expense and easing availability and access But this can provide a way of using GIS effectively only if the key players involved in the use and supply of spatial data are willing to share This book employs a theory from social psychology as an organising framework to systematize the determinants of organisations spatial data sharing behaviour It develops a model which explains the likely willingness of key individuals within organisations to engage in spatial data exchanges across organisational boundaries and then tests this on a survey based in South Africa **Environmental Modelling with GIS and Remote Sensing** Andrew Skidmore,2017-08-11 Most government agencies and private companies are investing significant resources in the production and use of geographical data The capabilities of Geographical Information Systems GIS for data analysis are also improving to the extent that the potential performance of GIS software and the data available for analysis outstrip the abilities of
