The Cognitive and Neural Bases of Spatial Neglect Hans-Otto Karnath, A. David Milner, Giuseppe Vallar, 2002 Spatial neglect is a disorder of space related behaviour It is characterized by failure to explore the side of space contralateral to a brain lesion or to react or respond to stimuli or subjects located on this side Research on spatial neglect and related disorders has developed rapidly in recent years These advances have been made as a result of neuropsychological studies of patients with brain damage behavioural studies of animal models as well as through functional neurophysiological experiments and functional neuroimaging The Cognitive and Neural Bases of Spatial Neglect provides an overview of this wide ranging field of scientific endeavour providing a cohesive synthesis of the most recent observations and results As well as being a fascinating clinical phenomenon the study of spatial neglect helps us to understand normal mechanisms of directing and maintaining spatial attention and is relevant to the contemporary search for the cerebral correlates of conscious experience voluntary action and the nature of personal identity itself The book is divided into seven sections covering the anatomical and neurophysiological bases of the disorder frameworks of neglect perceptual and motor factors the relation to attention the cognitive processes involved and strategies for rehabilitation Chapters have been written by a team of the leading international experts in this field This will
