Conceptualisation as a Biocognitive Phenomenon and Part of the Faculty of Language Jolanta Mazurkiewicz-Sokołowska, 2025-06-16 The volume addresses the issue of the faculty of language as a biocognitive phenomenon dealing with diverse aspects related to the category of prepositions on the basis of examples from selected languages The choice of this category was determined by the highly polysemous and fuzzy nature of prepositions Based on the empirical evidence concerning selected prepositions of some Slavic German and Romance languages individual chapters discuss i the status of the case assigned by a preposition ii learning and processing of prepositions iii prototypes and

metaphorical extensions iv axiology and valuation as well as v category overlap The volume brings together the generative and cognitive perspectives both usually treated as opposing by demonstrating the central role of conceptualisation seen as a multisensory phenomenon including emotions in the faculty of language highlighting the notion of embodiment Greek Prepositions Pietro Bortone, 2010-04-22 This is the most comprehensive history of the Greek prepositional system ever published It is set within a broad typological context and examines interrelated syntactic morphological and semantic change over three millennia By including for the first time Medieval and Modern Greek Dr Bortone is able to show how the changes in meaning of Greek prepositions follow a clear and recurring pattern of immense theoretical interest The author opens the book by discussing the relevant background issues concerning the function meaning and genesis of adpositions and cases He then traces the development of prepositions and case markers in ancient Greek Homeric and classical with insights from Linear B and reconstructed Indo European Hellenistic Greek which he examines mainly on the basis of Biblical Greek Medieval Greek the least studied but most revealing phase and Modern Greek in which he also considers the influence of the learned tradition and neighbouring languages Written in an accessible and non specialist style this book will interest classical philologists as well as historical linguists and theoretical linguists *Handbook of International Research in Mathematics Education* Lyn D. Mathematical Reasoning Lyn D. English, 2013-04-03 How we reason with mathematical ideas continues to be a fascinating and challenging topic of research particularly with the rapid and diverse developments in the field of cognitive science that have taken place in recent years Because it draws on multiple disciplines including psychology philosophy computer science linguistics and anthropology cognitive science provides rich scope for addressing issues that are at the core of mathematical learning Drawing upon the interdisciplinary nature of cognitive science this book presents a broadened perspective on mathematics and mathematical reasoning It represents a move away from the traditional notion of reasoning as abstract and disembodied to the contemporary view that it is embodied and imaginative From this perspective

mathematical reasoning involves reasoning with structures that emerge from our bodily experiences as we interact with the environment these structures extend beyond finitary propositional representations Mathematical reasoning is imaginative in the sense that it utilizes a number of powerful illuminating devices that structure these concrete experiences and transform them into models for abstract thought These thinking tools analogy metaphor metonymy and imagery play an important role in mathematical reasoning as the chapters in this book demonstrate yet their potential for enhancing learning in the domain has received little recognition This book is an attempt to fill this void Drawing upon backgrounds in mathematics education educational psychology philosophy linguistics and cognitive science the chapter authors provide a rich and comprehensive analysis of mathematical reasoning New and exciting perspectives are presented on the nature of mathematics e g mind based mathematics on the array of powerful cognitive tools for reasoning e g analogy and metaphor and on the different ways these tools can facilitate mathematical reasoning Examples are drawn from the reasoning of the preschool child to that of the adult learner
