*Risk Management in Outer Space Activities* Maria A. Pozza,Joel A. Dennerley,2022-02-09 Risk Management in Outer Space Activities assesses selected risks associated with space activities from an Australian and New Zealand perspective The book explores the rise of commercial space activities and considers the development of Australia and New Zealand s regulatory frameworks and how they are equipped to address new and emerging risks in the space sector The book examines the juxtaposition of international space law against the domestic legal regimes of Australia and New Zealand and how these regulatory frameworks are designed to create governance mechanisms to control space risk Both national jurisdictions approach space risk from the perspective of liability and international legal obligations but as a result of their different historical space trajectories their risk approaches differ This is illustrated by research that suggests that from an Australian point of view much of its space industry development has been influenced by Cold War era military and national security concerns On the other hand the New Zealand perspective is grounded on the rapid market led commercial development that is currently underway in the country The book examines a variety of risks that can and do emerge in the course of undertaking space activities It does this by presenting a series of space risk case studies There are chapters devoted to examining commercial space risks space insurance the risks posed by space debris cybersecurity and space assets light pollution as a risk for astronomy and the risks inherent in landing objects on the Moon The work contained in this book is intended to provide a clear practical and informed approach to understanding risk management in outer space activities It will appeal to policy makers risk professionals space lawyers national space agencies as well as academics researchers and students

**Space, Education, and Inclusion** Georg Reißler, Andreas Köpfer, Tobias Buchner, 2023-12-01 This timely edited volume brings together interdisciplinary perspectives on space and spatiality in inclusive education discourses. With research from an international range of scholars the book explores the intersections, boundaries and intermediary spaces of inclusion and exclusion within educational contexts. It advances thinking in inclusive education research and links discourses of the spatial turn in inclusive education with a call for thinking spatially. Instead of defining one spatial approach as the overarching framework for analysis, it considers the potential of combining spatial approaches from diverse disciplines including social sciences, educational science and geography. The book systematically identifies and links the relations between a diversity of spatial theoretical perspectives and phenomena of inclusion/exclusion. This volume provides invaluable transdisciplinary readings and reflections on space and spatiality in inclusive education and will be highly relevant for academics, researchers and postgraduate students in the fields of inclusive education, educational theory and the sociology of education.
