**Space Apprentice** Аркадий Натанович Стругацкий, Борис Натанович Стругацкий, 1981      *Space Odysseys* Jørgen Ole Bærenholdt, Kirsten Simonsen, 2017-05-15 The nature of spatial imaginations has become central to a range of major social and political debates Narratives on spatial inequality from the North South divide in global economic and political visions to marginalisation and ghettoisation in Western cities appear regularly in our daily newspapers Such examples indicate that issues of space spatiality are as crucial in our current societies as never before Space Odysseys brings together leading social scientists including John Urry and Derek Gregory to address a number of central issues in spatiality and social relations in the early 21st century Starting from the presupposition that space is a social dimension and a social construct it then presents examples of these conceptions of space at work While the book title s indirect reference to the film 2001 A Space Odyssey indicates the contributors interest in questions of voyages and mobility the plural use shows that the approaches to this conceptual exploration are multiple reflecting differences in experience in social context and or in gender class and ethnicity The book is divided into three main sections The first explores issues of mobility immobility and embodied narratives the second section deals with territoriality mobility and identity politics and the final section concludes with chapters on the spatial production of knowledge

## **The Design, Experience and Practice of Networked Learning**

Vivien Hodgson, Maarten de Laat, David McConnell, Thomas Ryberg, 2014-01-18 The Design Experience and Practice of Networked Learning Edited by Vivien Hodgson Maarten de Laat David McConnell and Thomas Ryberg This book brings together a wealth of new research that opens up the meaning of connectivity as embodied and promised in the term networked learning Chapters explore how contexts groups and environments can be connected rather than just learners how messy unexpected and emergent connections can be made rather than structured and predefined ones and how technology connects us to learning and each other but also shapes our identity These exciting new perspectives ask us to look again at what we are connecting and to revel in new and emergent possibilities arising from the interplay of social actors contexts technologies and learning Caroline Haythornthwaite University of British Columbia Despite creating fundamentally new educational economics and greatly increasing access teaching and learning in networks is a tricky business These chapters illuminate the complex interactions amongst tools pedagogy educational institutions and personal net presences helping us design and redesign our own networks In the process they take or extract network theory from the practice of real teaching and learning contexts making this collection an important contribution to Networked Learning Terry Anderson Athabasca University What kinds of learning can social networking platforms really enable Digging well beneath the hype this book provides a timely incisive analysis of why and how learning emerges or fails to in networked spaces The editors do a fine job in guiding the

reader through the rich array of theories and methods for tackling this question and the diverse contexts in which networked learning is now being studied This is a book for reflective practitioners as well as academics the book s close attention to the political pedagogical and organisational complexity of effective practice and the lived experience of educators and learners helps explain why networked learning has such disruptive potential but equally why it draws resistance from the establishment Simon Buckingham Shum The Open University The networked learning conference a biannual institution since 1998 celebrates its 14th year in this volume Here a range of studies reflecting networked learning experiments across Europe and other global contexts show important shifts away from a conservative tradition of e learning<sup>1</sup> research and unpeel dilemmas of promoting learning as an elusive practice in virtual environments The authors point towards important futures in online learning research where notions of knowledge connectivity and community<sup>1</sup> become increasingly elastic and engagements slide across material and virtual domains in new practices whose emergence is increasingly difficult to apprehend p Tara Fenwick University of Stirling The chapters in this volume explore new and innovative ways of thinking about the nature of networked learning and its pedagogical values and beliefs They pose a challenge to us to reflect on what we thought networked learning was 15 year ago where it is today and where it is likely to be headed Each chapter brings a particular perspective to the themes of design experience and practice of networked learning the chosen focus of the book The chapters in the book embrace a wide field of educational areas including those of higher education informal learning work based learning continuing professional development academic staff development and management learning The Design Experience and Practice of Networked Learning will prove indispensable reading for researchers teachers consultants and instructional designers in higher and continuing education for those involved in staff and educational development and for those studying post graduate qualifications in learning and teaching This the second volume in the Springer Book Series on Researching Networked Learning is based on a selection of papers presented at the 2012 Networked Learning Conference held in Maastricht The Netherlands
