most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence at this point in history we are in a unique position to gain first hand insight into the field and its development. To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world class contributors such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer, past ESO Director General, this book will be immensely useful to readers in the fields of space science, astronomy and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

Matas, L. D. Schmadel, G. Zech, 2013-12-14. From the reviews *Astronomy and Astrophysics Abstracts* has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy, astrophysics and neighbouring sciences. It is the most important English language abstracting journal in the mentioned branches. The abstracts are classified under more than hundred subject categories thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world. *Space Science Reviews* 1. Dividing the whole field plus related subjects into 108 categories, each work is numbered and most are accompanied by brief abstracts. Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use. The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes. *The Observatory Magazine* 1. **Satellite Laser Ranging in the 1990s: Report of the 1994 Belmont Workshop**, 1994.

Towards an Integrated Global Geodetic Observing System (IGGOS) Reinhard Rummel, Hermann Drewes, Wolfgang Bosch, Helmut Hornik, 2012-12-06. The international symposium *Towards an Integrated Global Geodetic Observing System* was an initiative of section II Advanced Space Technology of the International Association of Geodesy IAG. It took place in the building of the Bavarian Academy of Sciences in Munich from October 5-9 1998. About 130 scientists from 24 countries participated in the symposium. It was organized jointly by the Deutsches Geodätisches Forschungsinstitut and the Institut für Astronomische und Physikalische Geodäsie Technische Universität München. The objective of the symposium was an analysis of the state of art of geodetic space techniques and an outlook into the possibility of the establishment of a global integrated observing system. In view of the fact that most geodetic space techniques have reached or approach the one part

per billion relative precision level the question arises what their joint and coordinated operation could offer to the study of system Earth For this purpose the symposium was divided into four themes i e reference system and datum integration strength and weakness of space techniques upcoming gravity field satellite missions and implications for Earth sciences Each of these themes was addressed by invited lectures of prominent scientists with sufficient time left for discussion The oral sessions were complemented by poster sessions A panel discussion at the closing session completed the program
