Space Perception And The Philosophy Of Science:

Space-perception and the Philosophy of Science Patrick A. Heelan, 1983 Drawing on the phenomenological tradition in the philosophy of science and philosophy of nature Patrick Heelan concludes that perception is a cognitive world building act and is therefore never absolute or finished

Spatial Senses Tony Cheng, Ophelia Deroy, Charles Spence, 2019-05-29 This collection of essays brings together research on sense modalities in general and spatial perception in particular in a systematic and interdisciplinary way It updates a long standing philosophical fascination with this topic by incorporating theoretical and empirical research from cognitive science neuroscience and psychology The book is divided thematically to cover a wide range of established and emerging issues Part I covers notions of objectivity and subjectivity in spatial perception and thinking Part II focuses on the canonical distal senses such as vision and audition Part III concerns the chemical senses including olfaction and gustation Part IV discusses bodily awareness peripersonal space and touch Finally the volume concludes with Part V on multimodality *Spatial Senses* is an important contribution to the scholarly literature on the philosophy of perception that takes into account important advances in the sciences

Patrick A. Heelan's "Space-Perception and the Philosophy of Science" American Philosophical Association. Eastern Division,

Space-Time Geometries for Motion and Perception in the Brain and the Arts Tamar Flash, Alain Berthoz, 2021-01-04 This book is based on a two day symposium at the Paris Institute of Advanced Study titled space time geometries and movement in the brain and the arts It includes over 20 chapters written by the leading scientists and artists who presented their related research studies at the symposium and includes six sections the first three focus on space time geometries in perception action and memory while the last three focus on specific artistic domains drawing and painting dance music digital arts and robotics The book is accompanied by a dedicated webpage including related images and videos There is an ever growing interest in the topics covered by this book Space and time are of fundamental importance for our understanding of human perception action memory and cognition and are entities which are equally important in physics biology neuroscience and psychology Highly prominent scientists and mathematicians have expressed their belief that our bodies and minds shape the ways we perceive space and time and the physical laws we formulate Understanding how the brain perceives motion and generates bodily movements is of great significance There is also growing interest in studying how space time and movement subserve artistic creations in different artistic modalities e g fine arts digital and performing arts and music This interest is inspired by the idea that artists make intuitive use of the principles and simplifying strategies used by the brain in movement generation and perception Building upon new understanding of the spatio temporal geometries subserving movement generation and perception by the brain we can start exploring how artists make use of such neuro geometrical and neuro dynamic representations in order to express artistic concepts and emotionally affect the human observers and listeners Scientists have also started formulating new ideas of how aesthetic judgements emerge from the principles and brain mechanisms

subserving motor control and motion perception Covering novel and multidisciplinary topics this advanced book will be of interest to neuroscientists behavioral scientists artificial intelligence and robotics experts students and artists

Environment, Space, Place: Volume 1 / Issue 1 (Spring 2009) Gary Backhaus,2009 *Ideas for a Hermeneutic Phenomenology of the Natural Sciences* J.J. Kockelmans,2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science The ontological issues are discussed from a hermeneutic phenomenological point of view In addition the book contains critical discussions of basic themes raised by Carnap Hempel Stegmüller Kuhn Lakatos Hintikka Popper van Fraassen Heelan and Kisiel One of the basic theses developed in the book is that logical epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences Gadamer and Hermeneutics Hugh J. Silverman,2016-08-19 This title first published in 1991 opens with an account by Gadamer of his own life and work and their relation to the achievements of hermeneutics Building upon the key theme of dialogue Gadamer and Hermeneutics provides a series of essays either linked Gadamer to other major contemporary philosophers or focusing on a given Gadamerian theme This book will be of interest to students of literary theory **Edinburgh Companion to Twentieth-Century Philosophies** Constantin V. Boundas,2007-06-19 The Companion is organized into two sections each one of which reflects the developments of the Anglo American Analytic and the Continental European philosophical traditions respectively An appendix presents the main accomplishments of non Western philosophies in the same time frame Each section discusses the main movements and fields of the discipline throughout the century The authors have maintained a balance between the historians commitment to breadth and accuracy with the commitment of the systematic philosopher to the engaged point of view and to critical reflection The result is a distinctive reference book made up of a series of philosophical studies an invaluable companion to anyone who is searching for a panoramic but also reliable and challenging presentation of the philosophical ideas which shaped the last century **New Essays in Metaphysics** Robert C. Neville,1987-01-01 This volume displays fifteen of the many lively options in the field of metaphysics The authors having finished their formal education in the 1960s or later belong to the generation of philosophers whose rebellion was against those who thought they saw metaphysics in the grand sense to be passe or impossible The authors also share a commitment to the importance of metaphysics for the social and cultural life of our time Despite the diversity of argued opinions on the fundamental array of metaphysical topics these essays display the zest of a reborn enterprise at once appropriating a rich and honorable past and moving into new areas only recently thought illegitimate for philosophy Hermeneutics and the Natural Sciences Robert P. Crease,2012-12-06 This remarkable volume attests to the world wide development of a hermeneutical approach to the natural sciences Questions raised by the essays include What is a phenomenology of scientific

perception How does meaning arise out of laboratory situations How do individuals or groups come to terms with the particular problem situations in which they find themselves by drawing on the available conceptual and practical resources which structure these situations The essays are organized around three central themes One group of authors Heelan Kockelmans and Gremmen Jacobs recalls and applies existing historical resources of hermeneutical phenomenology to current scientific and social issues A second group Kisiel Eger considers the differences between a specifically hermeneutical approach to science and related approaches such as cultural studies and social constructivism A third group Ihde Gendlin seeks to forge new directions and tools for understanding natural scientific practice As Crease s introductory essay makes plain the authors share the commitment of hermeneutical philosophy to the priority of meaning over technique the primacy of the practical over the theoretical and the priority of situation over abstract formulation In the process the authors revive and transform the ancient Greek idea that the key to living well to being fully and authentically human resides primarily in the exercise of the practical not the theoretical virtues in the art of doing well in the workworld and acting well in the polis

Hermeneutic Philosophies of Social Science Babette Babich,2017-10-23 Hermeneutic philosophies of social science offer an approach to the philosophy of social science foregrounding the human subject and including attention to history as well as a methodological reflection on the notion of reflection including the intrusions of distortions and prejudice Hermeneutic philosophies of social science offer an explicit orientation to and concern with the subject of the human and social sciences Hermeneutic philosophies of the social science represented in the present collection of essays draw inspiration from Gadamer s work as well as from Paul Ricoeur in addition to Michel de Certeau and Michel Foucault among others Special attention is given to Wilhelm Dilthey in addition to the broader phenomenological traditions of Edmund Husserl and Martin Heidegger as well as the history of philosophy in Plato and Descartes The volume is indispensable reading for students and scholars interested in epistemology philosophy of science social social studies of knowledge as well as social studies of technology *Carnal Thoughts* Vivian Sobchack,2004-10-02 A group of sophisticated essays on how we experience film with all five senses and our sense of history

Phenomenology and Indian Philosophy D. P. Chattopadhyaya,Lester Embree,Jitendranath Mohanty,2011-05-01 This book shows the close relation between the phenomenology of the West and the phenomenological approach taken by Indian thinkers both classical and modern It illustrates that the underlying spirit of phenomenology and hermeneutics has been consciously followed by Indian philosophers for centuries and is not peculiar to Western thinkers It also shows that Edmund Husserl and K C Bhattacharyya were aware of these parallel trends of thought Phenomenology and Indian Philosophy addresses not only the basic theme of phenomenology but its aesthetic social psychological scientific and technological aspects as well **Art And Engagement** Arnold Berleant,2010-06-18 A new

aesthetic theory based on aesthetic perception and participation with the arts **Heidegger on Science** Trish Glazebrook,2012-02-23 Although Martin Heidegger is well known for his work on technology he is not often discussed in the

context of science broadly speaking This volume is the first to showcase diverse perspectives on Heidegger's assessments of the sciences looking at a number of different ways that Heidegger's writings contribute to questions concerning how we understand the world through science With particular attention to quantum theory natural science technoscience and a section devoted specifically to investigating what Being and Time has to say about science the book will be of interest to scholars in a wide range of disciplines and traditions It closes with consideration of questions about sustainability and ethics raised by Heidegger's engagement with the sciences

The Material Realization of Science Hans Radder, 2012-05-03 This book develops a conception of science as a multi dimensional practice which includes experimental action and production conceptual theoretical interpretation and formal mathematical work On this basis it addresses the topical issue of scientific realism and expounds a detailed referentially realist account of the natural sciences This account is shown to be compatible with the frequent occurrence of conceptual discontinuities in the historical development of the sciences Referential realism exploits several fruitful ideas of Jürgen Habermas especially his distinction between objectivity and truth it builds on a in depth analysis of scientific experiments including their material realization and it is developed through an extensive case study in the history and philosophy of quantum mechanics The new postscript explains how the book relates to several important issues in recent philosophy of science and science studies I highly recommend this book Radder is probably the first philosopher of science to make productive epistemological use of the notion of experimental system The postscript is most valuable since it connects his work not only to the topical debates in philosophy of science but also to history of science and science studies Hans Jörg Rheinberger Max Planck Institute for the History of Science Berlin About the first edition The debate on realism has recently become rather stale by repetition but Radder introduces original insights and has written a lively and well argued contribution to it The book is to be recommended also as a clear introduction to the complex of relevant issues Mary Hesse University of Cambridge Radder presents an ingenious approach to the issue of scientific realism and conceptual discontinuity I believe his idea that conceptual discontinuity presupposes other types of continuity is extremely important Mark Rowlands University of Alabama Tuscaloosa Hans Radder is professor of philosophy of science and technology at VU University Amsterdam He is the author of *In and About the World* and *The World Observed* *The World Conceived* He edited *The Philosophy of Scientific Experimentation* and *The Commodification of Academic Research Science and the Modern University* and is coeditor of *Science Transformed Debating Claims of an Epochal Break*

Philosophy of Technology Robert C. Scharff, Val Dusek, 2013-12-02 The new edition of this authoritative introduction to the philosophy of technology includes recent developments in the subject while retaining the range and depth of its selection of seminal contributions and its much admired editorial commentary Remains the most comprehensive anthology on the philosophy of technology available Includes editors insightful section introductions and critical summaries for each selection Revised and updated to reflect the latest developments in the field Combines difficult to find seminal essays with a judicious selection of

contemporary material Examines the relationship between technology and the understanding of the nature of science that underlies technology studies

Science Unfettered J. E. McGuire, Barbara Tuchańska, 2000 Working on a large canvas Science Unfettered contributes to the ongoing debates in the philosophy of science The ambitious aim of its authors is to reconceptualize the orientation of the subject and to provide a new framework for understanding science as a human activity Mobilizing the literature of the philosophy of science the history of science the sociology of science and philosophy in general Professors McGuire and Tuchanska build on these fields with the view of transforming their insights into a new epistemological and ontological basis for studying the enterprise of science In this approach McGuire and Tuchanska have combined work from both Anglo American and Continental traditions of philosophy As a result the works of Popper Kuhn Quine and Lakatos as well as Heidegger Gadamer Nietzsche Foucault and Feyerabend are called into play In addition Science Unfettered deals extensively with history and historicity offering a theory of historicity of science as it emerges in sociocultural contexts Unorthodox in its approach Science Unfettered articulates an alternative that views science ontologically as a practice a perspective from which traditional issues concerning the relationship of experiment to theory the cognitive to the social the relation between historical change and epistemic validity the meaning of objectivity and the like can be addressed in a more fruitful way than is possible by starting with the traditional ontological framework of subject and object

Portraits of American Continental Philosophers James R. Watson, 1999 Taken together these intimate self portraits provide a vibrant overview of the multiplicity and depth of continental philosophy in America Jacket

Phenomenology World-Wide Anna-Teresa Tymieniecka, 2014-11-14 Phenomenology is the philosophy of our times Through the entire twentieth century this philosophy unfolded and flourished following stepwise the intrinsic logic and dynamism of its original project as proposed by its founder Edmund Husserl Now its seminal ideas have been handed over to a new era The worldwide contributors to this volume make it manifest that phenomenological inspiration knows no cultural barriers It penetrates and invigorates not only philosophical disciplines but also most of the sectors of knowledge transforming our way of seeing the world our actions toward others and our lives Phenomenology's universal spread has however oftentimes diluted its original sense even beyond recognition and led to a weakening of its dynamics There is at present an urgent need to retrieve the original understanding of phenomenology to awaken its dormant forces and redirect them This is the aim of the present book resourcement and reinvigoration It is meant to be not only a reference work but also a guide for research and study To restore the authentic vision of phenomenology we propose returning to its foundational source in Husserl's project of a universal science unpacking all its creative capacities In the three parts of this work there are traced the stages of this philosophy's progressive uncovering of the grounding levels of reality ideal structures constitutive consciousness the intersubjective lifeworld and beyond The key concepts and phases of Husserl's thought are here exfoliated Then the thought of the movement's classical figures and of representative thinkers in succeeding generations is elucidated

Phenomenology's geographic spread is reviewed. We then proceed to the culminating work of this philosophy to the phenomenological life engagements so vigorously advocated by Husserl to the life significant issues phenomenology addresses and to how it has enriched the human sciences. Lastly the phenomenological project's new horizons on the plane of life are limned horizons with so powerful a draw that they may be said not to beckon but to summon. Here is the movement's vanguard. This collection has 71 entries. Each entry is followed by a relevant bibliography. There is a helpful Glossary of Terms and an Index of Names.
