expanded edition of *Psychology of Space Exploration Contemporary Research in Historical Perspective* provides an analysis of these and other challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space. This second edition includes an all new section exploring the challenges astronauts will encounter as they travel to asteroids, Mars, Saturn and the stars requiring an unprecedented level of autonomy. Updated essays discuss the increasingly important role of China in human spaceflight. In addition to examining contemporary psychological research, several of the essays also explicitly address the history of the psychology of space exploration. Leading contributors to the field place the latest theories and empirical findings in historical context by exploring changes in space missions over the past half century as well as reviewing developments in the psychological sciences during the same period. The essays are innovative in their approaches and conclusions, providing novel insights for behavioral researchers and historians alike.

The New Martians Nick Kanas, 2013-08-30. The year is 2035 and the crew from the first expedition to Mars is returning to Earth. The crewmembers are anxious to get home and ennui pervades the ship. The mood is broken by a series of mysterious events that jeopardize their safety. Someone or something is threatening the crew. Is it an alien being? A psychotic crewmember? A malfunctioning computer? The truth raises questions about the crewmembers' fate and that of the human race. In this novel, the intent is to show real psychological issues that could affect a crew returning from a long duration mission to Mars. The storyline presents a mystery that keeps the reader guessing, yet the issues at stake are based on the findings from the author's research and other space-related work over the past 40 years. The novel touches on actual plans being discussed for such an expedition as well as notions involving the search for Martian life and panspermia. The underlying science, in particular the psychological, psychiatric, and interpersonal elements, are introduced and discussed by the author in an extensive appendix. Nick Kanas is an Emeritus Professor of Psychiatry at the University of California, San Francisco, where he directed the group therapy training program. For over 20 years, he conducted research on group therapy, and for nearly 20 years after that, he was the Principal Investigator of NASA-funded research on astronauts and cosmonauts. He is the co-author of *Space Psychology and Psychiatry*, which won the 2004 International Academy of Astronautics Life Science Book Award, and the author of *Humans in Space: The Psychological Hurdles*, which won the 2016 International Academy of Astronautics Life Science Book Award. Dr. Kanas has presented talks on space psychology and on celestial mapping at several regional and Worldcon science fiction conventions. A Fellow of the Royal Astronomical Society, London, he has been an amateur astronomer for over 50 years and is an avid reader of science fiction. He is also the author of two non-fiction books, *Star Maps: History, Artistry, and Cartography* and *Solar System Maps: From Antiquity to the Space Age*, and two science fiction novels, *The New Martians* and *The Protos Mandate*, all published by Springer.
