A satellite is depicted in orbit against a dark background. The satellite has a central body with various instruments and a large, rectangular solar panel extended outwards. The panel is divided into several segments and has a metallic, reflective surface. The satellite's orientation is such that it appears to be moving from the upper right towards the lower left of the frame.

Handbook of Geostationary Orbits E.M. Soop, 1994-10-31 This Handbook of Geostationary Orbits is in principle an extension of the Introduction to Geostationary Orbits that was printed as a special publication by the European Space Agency ESA in 1983 The immediate purpose was to provide the theoretical background and some practical advice for the orbit control of geostationary spacecraft by means of the software package PEPSOC PEPSOC short for Portable ESOC Package for Synchronous Orbit Control was produced by the European Space Operations Centre ESOC to support spacecraft operations in the routine phase The resulting publication was a handbook for engineers and spacecraft operators rather than a classical textbook in celestial mechanics During the past eleven years the software system PEPSOC has found a wide application both within and outside the ESA member states At the same time the original Introduction found numerous readers also outside the group of PEPSOC operators The continuing development and the increasing use of the geostationary orbit has now created the need for a new more detailed publication to include new aspects that have emerged The present Handbook contains several additional subjects and more mathematics to describe the methods applied in PEPSOC The geophysical and astronomical parameters have been updated to reflect the latest recommended values This results in small deviations of the numerical data compared to the Introduction
