NASA's First 50 Years: Historical Perspectives Steven J. Dick,National Aeronautics and Space Administration,2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA s first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate

Frontiers of Space Exploration Roger D. Launius,2004-03-30 Since the first rocket technology experiments of the early 20th century space exploration has captivated the world Recent advances and setbacks have included the new discoveries from the Galileo mission the Mars Global Surveyor s revelation that water once existed on the Red Planet the International Space Station the advent of space tourism and the devastating Space Shuttle disasters This one stop guide to space exploration provides a wealth of information for student researchers A substantial Chronology of Events and a narrative history outline the key events and people in the progression of space research and activity Five topical essays including a look at the Space Shuttle examine several significant issues related to the politics and technology of space exploration from an international perspective These chapters elucidate several sets of documents that give shape and substance to the larger story Primary documents in this volume are organized by theme and represent the variety of materials available to anyone seeking a better understanding of the rise of space exploration Also included are biographical sketches of key people associated with space flight a listing of the human space flight missions undertaken since 1961 and an annotated bibliography of additional reading **NASA and the Space Industry** Joan Lisa Bromberg,2000-11-24 Few federal agencies

have more extensive ties to the private sector than NASA. NASA's relationships with its many aerospace industry suppliers of rocket engines, computers, electronics, gauges, valves, O-rings, and other materials have often been described as partnerships. These have produced a few memorable catastrophes but mostly technical achievements of the highest order. Until now, no one has written extensively about them. In *NASA and the Space Industry*, Joan Lisa Bromberg explores how NASA's relationship with the private sector developed and how it works. She outlines the various kinds of expertise public and private sectors brought to the tasks NASA took on, describing how this division of labor changed over time. She explains why NASA sometimes encouraged and sometimes thwarted the privatization of space projects and describes the agency's role in the rise of such new space industries as launch vehicles and communications satellites.

Humans in Outer Space - Interdisciplinary Odysseys Luca Codignola-Bo, Kai-Uwe Schrogl, 2009-06-18

Humans and space: When faced with the issue of space exploration, one generally has an idea of the fields of study and disciplines that are involved: technology, physics, and chemistry; robotics, astronomy, and planetary science; space biology and medicine; disciplines which are usually referred to as the sciences. In recent discussions, the human element of space exploration has attracted more and more the interest of the space sciences. As a consequence, adjacent disciplines have gained in relevance in space exploration and space research in times when human space flights are almost part of everyday life. These disciplines include psychology and sociology but also history, philosophy, anthropology, cultural studies, political sciences, and law. The contribution of knowledge in these fields plays an important role in achieving the next generation of space exploration where humans will resume exploring the Moon and eventually Mars, and where space tourism is beginning to be developed. With regard to technology, one might soon be prepared for this. Much less is this the case with space exploration by humans rather than by robots. Robotic explorations to other planets across the solar system have developed in the past 50 years since the beginning of the space age with the presence of humans in nearby space and the landing on the Moon. Space exploration is now not only focused on technological achievements, as its development also has social, cultural, and economic impacts. This makes human space exploration a topic to address in a cross-disciplinary manner.

How the Canyon Became Grand Stephen J. Pyne, 1999-07-01

Dismissed by the first Spanish explorers as a wasteland, the Grand Canyon lay virtually unnoticed for three centuries until nineteenth-century America rediscovered it and seized it as a national emblem. This extraordinary work of intellectual and environmental history tells two tales of the Canyon: the discovery and exploration of the physical Canyon and the invention and evolution of the cultural Canyon. How we learned to endow it with mythic significance. Acclaimed historian Stephen Pyne examines the major shifts in Western attitudes toward nature and recounts the achievements of explorers, geologists, artists, and writers from John Wesley Powell to Wallace Stegner and how they transformed the Canyon into a fixture of national identity. This groundbreaking book takes us on a completely original journey through the Canyon toward a new understanding of its niche in the American psyche, a journey that mirrors the making of the nation itself.
