Effects of Game and Game-like Training on Neurocognitive Plasticity Guido P. H. Band,Chandramallika Basak,Heleen A. Slagter,Michelle W. Voss,2016-05-17 Cognitive training is not always effective This is also the case for the form of cognitive training that this Research Topic focuses on prolonged performance on game like cognitive tasks The ultimate goal of this cognitive training is to improve ecologically valid target functions For example cognitive training should help children with ADHD to stay focused at school or help older adults to manage the complexity of daily life However so far this goal has proven too ambitious Transfer from trained to non trained tasks is not even guaranteed in a laboratory so there is a strong need for understanding how when and for how long cognitive training has effect Which cognitive functions are amenable to game training for whom and how Are there mediating factors for success such as motivation attention or age Are the improvements real or can they be attributed to nonspecific factors such as outcome expectancy or demand characteristics Are there better strategies to improve cognitive functions through game training This Research Topic of Frontiers in Human Neuroscience charts current insights in the determinants of success of game training **Technology Assessment in Education and Training** Eva L. Zakay Space World ,1960 **Visuo-spatial Working Memory** Robert H. Logie,2014-03-18 Representation of the visual and spatial properties of our environment is a pivotal requirement of everyday cognition We can mentally represent the visual form of objects We can extract information from several of the senses as to the location of objects in relation to ourselves and to other objects nearby For some of those objects we can reach out and manipulate them We can also imagine ourselves manipulating objects in advance of doing so or even when it would be impossible to do so physically The problem posed to science is how these cognitive operations are accomplished and proffered accounts lie in two essentially parallel research endeavours working memory and imagery Working memory is thought to pervade everyday cognition to provide on line processing and temporary storage and to update moment to moment our representation of the current state of our environment and our interactions with that environment There is now a strong case for the claims of working memory in the area of phonological and articulatory functions all of which appear to contribute to everyday activities such as counting arithmetic vocabulary acquisition and some aspects of reading and language comprehension The claims for visual and spatial working memory functions are less convincing Most notable has been the assumption that visual and spatial working memory are intimately involved in the generation retention and manipulations of visual images There has until recently been little hard evidence to justify that assumption and the research on visual and spatial working memory has focused on a relatively restricted range of imagery tasks and phenomena In a more or less independent development the literature on visual imagery has now amassed a voluminous corpus of data and theory about a wide range of imagery phenomena Despite this few books on imagery refer to the concept of working memory in any detail or specify the nature of the working memory system that might be involved in mental imagery This essay follows a line of reconciliation and positive critiquing in exploring the possible overlap between mental imagery and working memory Theoretical development in the book draws on data from both cognitive psychology and cognitive neuropsychology The aim is to stimulate debate to address directly a number of assumptions that hitherto have been implicit and to assess the contribution of the concept of working memory to our understanding of these intriguing core aspects of human cognition *The Path of Rebirth against the Will of Heaven* Karen Lee,2012-03-12 Jiangkou Town in Fulin southwestern China is close to the sea so most of the people here make a living from the sea and choose the profession of fisherman In the spring of 1984 the hostess of a very ordinary fisherman s family in Jiangkou Town gave birth to a baby boy after a silent delivery **Advances in Artificial Intelligence** Ahmed Y.
