Space Image Processing:

Space Image Processing Julio Sanchez, 2018-12-19 *Space Image Processing* covers the design and coding of PC software for processing and manipulating imagery obtained by satellites and other spacecraft. Although the contents relate to several scientific and technological fields, it serves as a programming book providing readers with essential technical information for developing PC applications. The material focuses on images of the planet and other celestial bodies obtained by orbiting and non-orbiting spacecraft. This book is not about raster graphics in general but about raster graphics processing as it applies to space imagery. Three parts divide the text: 1. Science background at an introductory level, scientific principles underlying space imagery and its processing topics related to space and remote sensing; 2. Technology topics related to space imagery, geodesy, cartography, image data formats, image processing; 3. Programming code examples for DOS and Windows programming on the PC, consideration of low-level and C code routines with a tutorial and demonstrative purpose. **Image**

Computing in Image Processing Mike Nachtgael, Dietrich van der Weken, Etienne E. Kerre, Wilfried Philips, 2007-06-24 Images have always been very important in human life. Their applications range from primitive communication between humans of all ages to advanced technologies in the industrial, medical, and military fields. The increased possibilities to capture and analyze images have contributed to the largeness that the scientific field of image processing has become today. Many techniques are being applied, including soft computing. *Soft Computing in Image Processing: Recent Advances* follows the edited volumes *Fuzzy Techniques in Image Processing* (volume 52, published in 2000) and *Fuzzy Filters for Image Processing* (volume 122, published in 2003) and covers a wide range of both practical and theoretical applications of soft computing in

image processing The 16 excellent chapters of the book have been grouped into five parts Applications in Remote Sensing Applications in Image Retrieval Applications in Image Analysis Other Applications and Theoretical Contributions The focus of the book is on practical applications which makes it interesting for every researcher that is involved with soft computing image processing or both scientific branches
