Space Junk:

What Is Space Junk? Todd Swatling, 2018-07-15 Every generation is filled with the wonder of what's out there beyond our planet making space travel and exploration one of the most popular science topics of all time. But what happens to all that stuff we send up into outer space? Does it come back down to Earth or stay up there forever? This exciting high interest topic attracts even reluctant readers to read about STEAM topics. Fact boxes add extra information that's Out of this World throughout the book. Each spread is complemented with vivid NASA photography. *Space Junk* Karen Romano Young, 2016-01-01 Scientists have identified at least 100 million pieces of space debris from paint chips to nonoperational zombie satellites floating in Earth's orbit. And over 100 tons of those pieces enter Earth's atmosphere each year. Journey into outer space and learn about the dangers of space junk collisions, how scientists track them, and how space agencies are working to develop new technologies to clean up the space junk. Along the way you'll hear from the scientists who are working to ensure that outer space remains a safe place to travel and explore. If we don't tackle the space junk problem, it might be impossible to travel into space; it could even trap us on Earth. *Garbage in Space* Margaret J. Goldstein, 2017-08-01 Audisee eBooks with Audio combine professional narration and sentence highlighting for an engaging read-aloud experience. Did you know that companies and governments send more than one hundred satellites into space every year? And that most of those satellites continue to orbit Earth even after they have stopped working? More than 500,000 old satellites, pieces of metal, and other bits of junk currently pollute Earth's orbit. And that number is growing. Astronomers, engineers, and politicians all agree that the future of space exploration is in danger if this debris isn't taken care of. But the problem of garbage in space is difficult and expensive to solve. In this book, learn more about this problem and its potential solutions. **Space Garbage** Ruth Owen, 2014-12-15 Are people in danger of being hit by falling space garbage? Readers find the answer as they learn about what space garbage is and how it could affect other objects in space and people on Earth. Through comprehensive text, readers learn about the many kinds of space garbage, including pieces of rockets. They also find fact boxes designed to give them even more information about space garbage. This otherworldly problem is shown in vivid detail through amazing photographs. Readers will be excited to learn about space through a closer look at the garbage orbiting Earth. *Space Junk* Joyce Markovics, 2023-01-15 Space junk is any human-made object in orbit around Earth that no longer has a use, and it's a huge problem. This debris includes anything from large satellites and rocket parts to tiny screws and paint chips. Space junk can damage a spacecraft and also cause issues for humans on Earth. This book takes readers on an exciting out-of-this-world voyage and uncovers cutting-edge technology while supporting STEM and NGSS standards. Each book contains fact boxes, sidebars, a glossary, an index, and places to go for more information. Technology has allowed people to explore space from building and launching spacecraft to walking on the moon and finding black holes. Cosmic Clutter and Why We Must Tackle the Space Junk Problem Daniel Triana,2024-12-22 In the vast expanse of space an invisible threat looms above us a growing crisis that could crash into your home at any moment This is not a plot from a science fiction movie but an urgent reality space debris As humanity's reach extends beyond Earth we have left behind a trail of derelict satellites and satellite scrap that now orbit our planet like cosmic clutter in an attic These remnants of past missions may seem distant and irrelevant but their potential to wreak havoc is very real Every year thousands of pieces of this so called space junk are added to our celestial backyard Each fragment travels at speeds up to 17 500 miles per hour fast enough for even the smallest piece to cause catastrophic damage if it collides with active satellites or spacecraft The danger isn't just hypothetical incidents where space junk has crashed into homes on Earth serve as stark reminders that this problem is closer than we might think If left unchecked this floating graveyard threatens not only future space exploration but also our everyday technologies here on Earth from GPS systems to weather forecasting tools all relying on satellites in perilous orbits Addressing this issue has never been more crucial for safeguarding both terrestrial life and the frontiers of discovery beyond our atmosphere
