Space Odyssey Mission Report Stephen Cole, Christopher Riley, Jenny Grinsted, Tim Haines, 2004 Zoe walks across the patchwork of molten lava that forms the surface of Io Bigger than anything she has ever seen Jupiter fills the sky Its Great Red Spot seems fixed on her like an evil eye Follow Commander Tom Kirby and the crew of the Pegasus on the journey of a lifetime This book is a space adventure based on real science using amazing CGI generated images taken from the TV series to bring the experience of travelling to other planets vividly to life The body text reads like a classic children s space adventure but each spread also includes computer screen style fact boxes These are integrated into the narrative as briefings from Mission Control and contain masses of hard factual information about the places the astronauts visit and the technology they use to survive

Dark Mission Richard C. Hoagland, Mike Bara, Michael Bara, 2009 For most people the word NASA suggests a squeaky clean image of technological infallibility Yet the truth is that NASA was born as a lie and has concealed the truth about its occult origins ever since Mystical organisations dominate NASA and carry out their own agendas behind the scenes Why was the Bush administration hell bent on returning to the moon Why is there a new space race with Russia China and even India Hoagland and Bara answer these questions and many more *Soviet Aeronautics and Astronautics*, 1985 *NASA's Scientist-Astronauts* Shayler David, Colin Burgess, 2007-09-19 Mounting pressure in the early 1960s from the National Academy of Sciences NAS to study ways of expanding the role of astronauts to conduct science on future space missions led to NASA s conclusion that flying scientifically trained crewmembers would generate greater returns from each mission NASA and industry studies continued investigating possibilities that could lead to the eventual creation of the first space stations using surplus Apollo hardware through the Apollo Applications Programme AAP There was also a growing interest within the military to create their own manned space station programme conducting on orbit experiments and research with strategic advantages for national security In October 1964 the Soviets launched Voskhod 1 whose 3 man crew were identified as the first scientific passengers in space A few days later NASA and the NAS had completed joint studies into the possibility of using scientists in the manned space programme and invited scientists to apply for astronaut training In selecting the first group of scientist astronauts NASA had one firm requirement any person accepted into the programme would have to qualify as a military jet pilot While the second group of scientists were completing their academic survival and flight training programme the remaining members of the first scientist astronaut group were involved in supporting the developing Apollo Applications programme and the Apollo lunar programme *Yearbook on Space Policy 2016* Cenani Al-Ekabi, Stefano Ferretti, 2018-02-22 The Yearbook on Space Policy edited by the European Space Policy Institute ESPI is the reference publication analysing space policy developments Each year it presents issues and trends in space policy and the space sector as a whole Its scope is global and its perspective is European The Yearbook also links space policy with other policy areas It highlights specific events and issues and provides useful insights data and information on space activities The

Scientific and Technical Aerospace Reports ,1995 *NASA CORE, Central Operation of Resources for Educators* United States. National Aeronautics and Space Administration,2002 *Moondust* Andrew Smith,2006-04-04 In 1999 Andrew Smith was interviewing Charlie Duke astronaut and moon walker for the Sunday Times During the course of the interview which took place at Duke s Texan home the telephone rang and Charlie left the room to answer it When he returned some twenty minutes later he seemed visibly upset It seemed that he d just heard that the previous day one of his fellow moon walkers the astronaut Pete Conrad had died The more Charlie spoke the more Andrew realised that his grief was something more than the mere fact of losing a friend Now theres only nine of us he said Only nine Which meant that one day not long from now there would be none and when that day came no one on earth would have known the giddy thrill of gazing back at us from the surface of the moon The thought shocked Andrew and still does Moondust is his attempt to understand why The Apollo moon programme has been called the last optimistic act of the 20th Century Over a strange three year period between 1969 and 1972 twelve men made the longest and most eccentric of all journeys and all were indelibly marked by it In Moondust Andrew sets out to interview all the remaining astronauts who walked on the moon and to find out how their lives were changed for ever by what had happened Where do you go after you ve been to the moon In addition to this question that would prove hugely troubling to many of the returned astronauts they also had to deal with the fantasies of faceless millions at their backs for this was the first truly global media event The walkers would forever be caught between the gravitational pull of the moon and the earth s collective dreaming

Deep Space Propulsion K. F. Long, 2011-11-25 The technology of the next few decades could possibly allow us to explore with robotic probes the closest stars outside our Solar System and maybe even observe some of the recently discovered planets circling these stars This book looks at the reasons for exploring our stellar neighbors and at the technologies we are developing to build space probes that can traverse the enormous distances between the stars In order to reach the nearest stars we must first develop a propulsion technology that would take our robotic probes there in a reasonable time Such propulsion technology has radically different requirements from conventional chemical rockets because of the enormous distances that must be crossed Surprisingly many propulsion schemes for interstellar travel have been suggested and await only practical engineering solutions and the political will to make them a reality This is a result of the tremendous advances in astrophysics that have been made in recent decades and the perseverance and imagination of tenacious theoretical physicists This book explores these different propulsion schemes all based on current physics and the challenges they present to physicists engineers and space exploration entrepreneurs This book will be helpful to anyone who really wants to understand the principles behind and likely future course of interstellar travel and who wants to recognize the distinctions between pure fantasy such as Star Trek s warp drive and methods that are grounded in real physics and offer practical technological solutions for exploring the stars in the decades to come
