

Stargazing

SPACE EXPLORATION is the greatest scientific adventure of all. In the 1950s, after centuries of stargazing, scientists took a leap into the sky. They sent the first satellite into orbit. Soon, space probes and human flights were revealing more and more about the Moon, planets and stars.

1 Galileo's discoveries

In 1609, Italian astronomer Galileo pointed his telescope at the night sky. He discovered that the Moon's surface was covered with craters and mountains and was the first to see clearly the separate stars of the Milky Way.

2 Dione by mirrors

Galileo's telescope used lenses. But a century later, Newton designed an optical telescope in which light rays enter through a lens at the front and are reflected by a mirror at the back. This design is called a reflecting telescope.

3 On a stand

The telescope's view from mirrors is better than from lenses. But it is still not a perfect view. To get a better view, astronomers use telescopes that are mounted on a stand. This allows them to move the telescope in any direction.

4 Dished up

Before it is built, there is a design. Astronomers use a computer to design a telescope. They use a computer to design a telescope that can collect light from stars and other objects in space. They can design very large telescopes that would be too expensive to build. They can also design telescopes that would be too expensive to build.

5 The Hubble Space Telescope

This telescope orbits the Earth. Because it is above the Earth's atmosphere, it can see things that ground-based telescopes cannot see.

Spaces of Geographical Thought Paul Cloke, Ron Johnston, Ronald John Johnston, 2005-02-16 *Spaces of Geographical Thought* examines key ideas like space and place which inform the geographic imagination. The text explains the significance of these binaries in the constitution of geographic thought and shows how many of these binaries have been interrogated and reimagined in more recent geographical thinking. A consideration of these binaries will define the concepts and situate students in the most current geographical arguments and debates. The text will be required reading for all modules on the philosophy of geography and on geographical theory. **The Routledge Handbook of Sensory Archaeology** Robin Skeates, Jo Day, 2019-10-28 Edited by two pioneers in the field of sensory archaeology this Handbook comprises a key point of reference for the ever expanding field of sensory archaeology one that surpasses previous books in this field both in scope and critical intent. Digitally Disrupted Space Anastasia Panori, 2024-02-15 *Digitally Disrupted Space Proximity and New Development Opportunities for Regions and Cities* develops an analytical framework of the key structural elements in relation to digital space and its impact on existing spatial interactions at a regional and urban level. It puts forth the argument that digital space is a new form of space acting complementary to existing spatial structures and creating novel interactions between and/or within them. It explores how digital space enhances connected intelligence by combining knowledge intensive activities cooperation between organisational and institutional actors and smart environments of knowledge creation and diffusion. Readers will better understand the connections between digital transformations and traditional paths of regional development as well as underlying mechanisms fostering externalities and proximity emergence triggering effective collaboration between the digital and other expressions of space. The first set of chapters Part I focuses

Retailising Space Prof Dr Mattias Kärrholm, 2013-06-28 Over the past few years there has been a proliferation of new kinds of retail space Retail space has cropped up just about everywhere in the urban landscape in libraries workplaces churches and museums In short retail is becoming a more and more manifest part of the public domain The traditional spaces of retail such as city centres and outlying shopping malls are either increasing in size or disappearing producing new urban types and whole environments totally dedicated to retail The creation of these new retail spaces has brought about a re and de territorialisation of urban public space and has also led to transformations in urban design and type of materials used and even in the logic and ways through which these design amenities meet the needs of retailers and or consumers This book describes how the retailisation of public domains affects our everyday life and our use of the built environment Taking an architectural and territorial perspective on this issue it looks specifically at how retail and consumption spaces have changed and territorialised urban life in different ways It then develops a methodology and a set of concepts to describe and understand the role of architecture in these territorial transformations
