Critical Issues in the History of Spaceflight Stephen J. Dick, Steven J.

Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience Amazon *Space Weapons (Star Wars)*, 1985 Space as a Strategic Asset

Joan Johnson-Freese, 2007 Joan Johnson Freese argues that the race for space weapons and the U.S. quest for exclusive or at least dominant ownership of strategic space assets have alienated the very allies that the United States needs in order to maintain its leading role in space exploration Taking a balanced look at the issues that have contributed to the decline of America's manned space program such as lack of political support and funding Johnson Freese offers not only a critique but also a plan for enhancing U.S. space security through cooperation rather than competition She begins with a brief overview of the history of international space development through four eras before Sputnik the space race after Apollo and globalization Then she focuses on how policy changes of the mid 1990s have changed the nation examining why the United States has grown obsessed with the development of space technology not just as a tool for globalization but as a route toward expanding an already dominant arsenal of weapons Johnson Freese claims that these policy choices have greatly affected the attitudes and actions of other countries and in the fight to achieve security the United States has instead put itself at greater peril Johnson Freese explains complex technical issues in clear accessible terms and suggests a way forward that is comprehensive rather than partisan America is not the only country with space ambitions but it is unique in viewing space as a battlefield and the technological advancements of other nations as a dire threat Urgent and persuasive Space as a Strategic Asset underscores the danger of allowing our space program to languish and the crucial role of cooperation in protecting the security of our country and the world Law and Regulation of Commercial Mining of Minerals in Outer Space Ricky

Lee, 2012-03-14 This monograph addresses the legal and policy issues relating to the commercial exploitation of natural resources in outer space It begins by establishing the economic necessity and technical feasibility of space mining today an estimate of the financial commitments required followed by a risk analysis of a commercial mining venture in space identifying the economic and legal risks This leads to the recognition that the legal risks must be minimised to enable such projects to be financed This is followed by a discussion of the principles of international space law particularly dealing with

state responsibility and international liability as well as some of the issues arising from space mining activities Much detail is devoted to the analysis of the content of the common heritage of mankind doctrine The monograph then attempts to balance such interests in creating a legal and policy compromise to create a new regulatory regime **Cyber War and Peace** Scott J.
