Immunological and Clinical Aspects of Multiple Sclerosis R.E. Gonsette, P.H. Delmotte, 2012-12-06 Looking back is a luxury for which scientists normally have little time This XXV Anniversary Symposium however gives the opportunity of reminding us that in Belgium where the risk of developing multiple sclerosis is among the highest in the world a great man to whom we all pay tribute I mean Dr Ludo van Bogaert in 1957 took the initiative in founding the Belgian Research Group for Multiple Sclerosis It may sound immodest but since that time members of the Belgian Research Group happen to have an honourable record of important contributions to MS research quite out of proportion to the financial support they received for it Indeed when compared to the situation in English speaking countries funding of MS research has always been neglected in our country in spite of the fact that in 1958 acting on the advice of the Belgian Research Group the Belgian National MS Society was founded with the specific object of collecting money for research as well as for social care At that time the difficulty in raising funds for research was partly due to the fact that solving the problem of MS appeared almost impossible Scientists could apparently only too slowly improve their ability to prevent and cure the disease Media were indifferent to MS which was considered to have no news value and the public remained uninformed

Spinal Cord Medicine, Second Edition

Christopher M. Bono, Diana Cardenas, Frederick S. Frost, Margaret C. Hammond, Laurie B. Lindblom, Inder Parkash, Steven A. Stiens, Robert M. Woolsey, 2010-03-19

A Doody's Core Title 2012

The thoroughly revised Second Edition of this authoritative reference continues to define the standard of care for the field of spinal cord medicine. Encompassing all of the diseases and disorders that may affect the proper functioning of the spinal cord or spinal nerves, this comprehensive volume provides a state-of-the-art review of the principles of care and best practices for restoring function and quality of life to patients with spinal cord injuries. Expert contributors from multiple disciplines cover topics ranging from acute medical and surgical management of specific problems to cutting-edge research, bladder, bowel, and sexual dysfunction, neurologic and musculoskeletal issues, advanced rehabilitation techniques and technologies, functional outcomes, and psychosocial care. While comprehensive in scope, *Spinal Cord Medicine: Principles and Practice*, Second Edition, offers practical guidance for physicians and other health care professionals involved in the management of individuals with SCI, multiple sclerosis, and other spinal cord disorders. The Second Edition has been completely updated to fully reflect current science and practice. Each section has been re-ordered to better present information, and the Second Edition brings in many new authors and topics, more diagrams, illustrations, and tables to solidify concepts, and contains 18 entirely new chapters.

Spinal Cord Medicine: Principles and Practice, Second Edition, reflects the breadth and depth of this multifaceted specialty. Involving over 150 authors from more than 20 fields of medicine, it is a trusted reference for anyone who works with spinal cord patients and strives to deliver superior clinical care and improve outcomes.

Applied Neurosciences for the Allied Health Professions

Douglas McBean, Frederike van Wijck, 2012-09-21

This brand new resource provides a solid, comprehensive, and accessible foundation in neurosciences for undergraduates and pre-registration postgraduate students. Using a multidisciplinary approach, it will guide students in their understanding of the most commonly found problems in neurological rehabilitation and inform their clinical practice. The book starts with the foundation of basic neurosciences, covering the normal function and structure of the nervous system from the organism as a whole through to the molecular level. It also introduces perceptuo-motor control and learning topics that lie at the heart of rehabilitation. The book then goes on to discuss problems that allied health professionals commonly encounter in neurological rehabilitation. Topics covered include problems with perception and movement planning, attention and memory, communication, motivation, and emotion, sleep, continence, and sexuality. The book also introduces key theories and evidence underpinning both behavioural and pharmacotherapeutic interventions used in neurological rehabilitation. The book closes by summarising current principles, underpinning best practice, and also looks to the future by identifying gaps in evidence-based practice, with ideas for future research and what the future may hold for neurological rehabilitation. Throughout, a variety of supplementary information boxes point towards additional material, such as Case Studies which highlight the clinical relevance of topics discussed, and a variety of Research Boxes which refer to more advanced material and/or original research studies. Each chapter ends with self-assessment questions which will check progress and prompt students to reflect.

on how the information presented in the chapter could be applied to clinical practice Written by a multidisciplinary team highly experienced in teaching research and clinical practice Lays the foundation of basic neurosciences for allied health students Accessible and comprehensive text Introduces students to key theories and evidence underpinning neurological rehabilitation Focuses on clinically relevant information End of chapter self assessment questions of different levels of complexity National Library of Medicine Current Catalog National Library of Medicine (U.S.),1965 *Brain Injury Treatment* Jose Leon-Carrion,Klaus R.
