Spatial And Temporal Price And Allocation Models:

Spatial and Temporal Price and Allocation Models Takashi Takayama, 1971 *Spatial and Temporal Price and Allocation Models* Takashi Takayama, George G. Judge, 1971 **Spatial and temporal price and allocation models** Takashi Takayama, George G. Judge, 1971 Commodity Modeling and Pricing Peter V. Schaeffer, 2008-10-06 Commodity Modeling and Pricing provides extensions and applications of state of the art methods for analyzing resource commodity behavior Drawing from the seminal work of Professor Walter Labys on the development of econometric methods for forecasting commodity prices this collection of essays features expert contributors ranging from practitioners in private industry public sector and nongovernmental organizations to scholars in higher education all of whom were Labys's former students or collaborators Filled with in depth insights and expert advice Commodity Modeling and Pricing contains the information you need to excel in this demanding environment **Readings in Econometric Theory and Practice** W.E. Griffiths, H. Lütkepohl, M.E. Bock, 2014-06-28 This volume honors George Judge and his many varied and outstanding contributions to econometrics statistics mathematical programming and spatial equilibrium modeling The papers are grouped into four parts each part representing an area in which Professor Judge has made a significant contribution The authors have all benefited in some way directly or indirectly through an association with George Judge and his work The three papers in Part I are concerned with various aspects of pre test and Stein rule estimation Part II contains applications of Bayesian methodology new developments in Bayesian methodology and an overview of Bayesian econometrics The papers in Part III comprise new developments in time series analysis improved estimation and Markov chain analysis The final part on spatial equilibrium modeling contains papers that had their origins from Professor Judge's pioneering work in the 60s Recent Advances in Spatial Equilibrium Modelling Jeroen C.J.M. van den Bergh, Peter Nijkamp, Piet Rietveld, 2012-12-06 Prices and quantities of both stock and flow variables in an economic system are decisively influenced by their spatial coordinates Any equilibrium state also mirrors the underlying spatial structure and a tatonnement process also incorporates the spatial ramifications of consumer and producer behaviour The recognition of the spatial element in the formation of a general equilibrium in a complex space economy already dates back to early work of Losch Isard and Samuelson but it reached a stage of maturity thanks to the new inroads made by Takayama This book is devoted to spatial economic equilibrium SPE analysis and is meant to pay homage to the founding father of modern spatial economic thinking Professor Takayama This book witnesses his great talents in clear and rigorous economic thinking regarding an area where for decades many economists have been groping in the dark Everybody who wants to study the phenomenon of spatial economic equilibrium will necessarily come across Takayama's work but this necessity is at the same time a great pleasure Studying his work means a personal scientific enrichment in a field which is still not completely explored The present volume brings together recent contributions to spatial equilibrium analysis written by friends and colleagues of Takayama The structure of

the book is based on four main uses of spatial equilibrium models i the imbedding of spatial flows in the economic environment related to e g *Modeling and Forecasting Primary Commodity Prices* Walter C. Labys, 2017-03-02 Recent economic growth in China and other Asian countries has led to increased commodity demand which has caused price rises and accompanying price fluctuations not only for crude oil but also for the many other raw materials Such trends mean that world commodity markets are once again under intense scrutiny This book provides new insights into the modeling and forecasting of primary commodity prices by featuring comprehensive applications of the most recent methods of statistical time series analysis The latter utilize econometric methods concerned with structural breaks unobserved components chaotic discovery long memory heteroskedasticity wavelet estimation and fractional integration Relevant tests employed include neural networks correlation dimensions Lyapunov exponents fractional integration and rescaled range The price forecasting involves structural time series trend plus cycle and cyclical trend models Practical applications focus on the price behaviour of more than twenty international commodity markets **Handbook of Regional and Urban Economics** P.

Nijkamp, Edwin S. Mills, P. C. Cheshire, 1986 This second volume of the Handbook presents professional surveys of all the important topics in urban economics The first section contains 6 surveys on locational analysis the second 5 surveys of specific urban markets and the third part presents 5 surveys of government policy issues The book brings together exhaustive research by distinguished scholars from many countries It is the only complete survey volume of urban economics and should serve as a reference volume to scholars and graduate students for many years For more information on the Handbooks in Economics series please see our home page on <http://www.elsevier.nl/locate/hes> **Structure and Change in the Space Economy** T.R. Lakshmanan, Peter Nijkamp, 2012-12-06 Analysis of the space economy demands a keen curiosity supported by a rigorous methodology and a strong sense of the problems at hand However the blend of these two capabilities is more unusual than one would be inclined to believe Professor Martin Beckmann is one of those exceptional scholars whose original theoretical insights and elegant contributions have been crucial to our understanding of the complex mechanism of the space economy Drawing on the basic social science theory he has developed a significant body of knowledge which represents fundamental contributions to the fields of location theory transportation economics mathematical economics and organizational theory For over four decades Martin Beckmann's creativity originality and excellence in the broad sense of scientific discovery made him play a pivotal and leading role in regional science A creative artist Martin Beckmann was never a loner he not only presented his views in that spare and elegant style we know him by but also listened One may say that on these intellectual voyages in the space economy Martin Beckmann was both a teacher and a pupil Accompanying him on such a discovery trip was a memorable experience the final destination was not always defined but the journey was ever exciting and full of surprises Some of the great many fellow travellers of Martin Beckmann offer a tribute to a great scientist and professional colleague through this Festschrift **Mathematical Models in Economics - Volume II** Wei-Bin

Zhang,2010-06-10 Mathematical Models in Economics is a component of Encyclopedia of Mathematical Sciences in which is part of the global Encyclopedia of Life Support Systems EOLSS an integrated compendium of twenty one Encyclopedias This theme is organized into several different topics and introduces the applications of mathematics to economics Mathematical economics has experienced rapid growth generating many new academic fields associated with the development of mathematical theory and computer Mathematics is the backbone of modern economics It plays a basic role in creating ideas constructing new theories and empirically testing ideas and theories Mathematics is now an integral part of economics The main advances in modern economics are characterized by applying mathematics to various economic problems Many of today s profound insights into economic problems could hardly be obtained without the help of mathematics The concepts of equilibrium versus non equilibrium stability versus instability and steady states versus chaos in the contemporary literature are difficult to explain without mathematics The theme discusses on modern versions of some classical economic theories taking account of balancing between significance of economic issues and mathematical techniques These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *Operations Research Mathematics and Models* Saul I. Polak,J.B. van der Kamp,2012-12-06 This liber amicorum honours Professor Jan Tissot van Patot as a scholar referring in particular to his concern with transport economics The significance of his work grew out of his influence within Netherlands Railways as with the passage of the years he dedicated himself increasingly to the vastly wider field of transport economics I would emphasize however that his theoretical knowledge and views in wider contexts have also been of great value to Netherlands Railways and I greatly appreciate this opportunity of referring to this aspect in a few personal words It is characteristic both of his person and his attitude that his work was often the occasion for contacts of a more personal nature contacts which were profoundly marked by his philosophy and convictions Our relations date from more than thirty seven years ago when he asked me for a contribution for a magazine which he helped to edit at that time and which was concerned with the same field as I was We became colleagues when he entered the service of NS the Netherlands Railways His sphere of work at that time was such that he was consulted more and more frequently by others His particular value to NS has been the increased dimension of transport policy and decision

making he added to the company's existing policy and decision making New Directions in Computational Economics
William W. Cooper, Andrew B. Whinston, 2012-12-06 New Directions in Computational Economics brings together for the first time a diverse selection of papers sharing the underlying theme of application of computing technology as a tool for achieving solutions to realistic problems in computational economics and related areas in the environmental, ecological, and energy fields. Part I of the volume addresses experimental and computational issues in auction mechanisms, including a survey of recent results for sealed bid auctions. The second contribution uses neural networks as the basis for estimating bid functions for first price sealed bid auctions. Also presented is the smart market computational mechanism which better matches bids and offers for natural gas. Part II consists of papers that formulate and solve models of economics systems. Amman and Kendrick's paper deals with control models and the computational difficulties that result from nonconvexities. Using goal programming, Nagurney, Thore, and Pan formulate spatial resource allocation models to analyze various policy issues. Thompson and Thrall next present a rigorous mathematical analysis of the relationship between efficiency and profitability. The problem of matching uncertain streams of assets and liabilities is solved using stochastic optimization techniques in the following paper in this section. Finally, Part III applies economic concepts to issues in computer science in addition to using computational techniques to solve economic models. Handbook of Regional Growth and Development Theories
Roberta Capello, Peter Nijkamp, 2019 Regional economics, an established discipline for several decades, has undergone a period of rapid change in the last ten years, resulting in the emergence of several new perspectives. At the same time, the methodology of regional economics has also experienced some surprising developments. This fully revised and updated Handbook brings together contributions looking at new pathways in regional economics, written by many well-known international scholars. The aim is to present the most cutting-edge theories explaining regional growth and local development. The authors highlight the recent advances in theories, the normative potentialities of these theories, and the cross-fertilization of ideas between regional and mainstream economists. It will be an essential source of reference and information for both scholars and students in the field. Energy Abstracts for Policy Analysis, 1978
