O'Donohue,Lorraine T. Benuto,Lauren Woodward Tolle,2014-07-08 Adolescence is a pivotal period of development with respect to health and illness It is during adolescence that many positive health behaviors are consolidated and important health risk behaviors are first evident thus adolescence is a logical time period for primary prevention In addition the predominant causes of morbidity and mortality in adolescence are quite different from those of adults indicating that early identification and treatment of adolescent health problems must be directed to a unique set of targets in this age group Moreover because of the particular developmental issues that characterize adolescence intervention efforts designed for adults are often inappropriate or ineffective in an adolescent population Even when chronic illnesses are congenital or begin in childhood the manner in which the transition

from childhood to adolescence to young adulthood is negotiated has important implications for disease outcomes throughout the remainder of the person's life span. Organized in five major sections: General Issues, Developmental Issues, Treatment and Training, Mental Health, and Physical Health, and 44 chapters, *Handbook of Adolescent Health Psychology* addresses the common and not so common health issues that tend to affect adolescents. Family Medicine A.K. David, T.A. Jr. Johnson, D.M. Phillips, J.E. Scherger, Robert B. Taylor, 2013-06-29. Much is new in Family Medicine since the last edition of our textbook. For example, not only is the therapy of human immunodeficiency virus (HIV) disease and the acquired immunodeficiency syndrome (AIDS) much different than a few years ago, the epidemiology of the disease has also changed, and more than half of the family physicians in a rural state such as Oregon have already managed patients with HIV disease or AIDS. 1. There are new immunization recommendations for children and new antibiotics for the treatment of bacterial infections. Computers are bringing medical informatics and on-line consultation into office practice. Medicare physician payment reform is underway and the reality of rationing medical care has been recognized. There has been a recent increase in student interest in a family practice career. 2. Coincidental with a Council on Graduate Medical Education (COGME) recommendation that at least 50 percent of all residency graduates should enter practice as generalists. Also, there is increasing awareness of the need for a Center for Family Practice and Primary Care at the National Institutes of Health. This all new fourth edition is intended to present the scientific and practical basis of family medicine with special attention to what's new in family medicine. The emphasis is on how the physician provides continuing and comprehensive care for persons of all ages with clinical content selected from the perspective of family physicians. The format of the book like the practice of family medicine continues to change.
