Images and Strategies for Autonomy Ole Elgström, 2013-11-11 How do small states approach their security problems What types of strategic instruments exist for small states and when and why are certain strategies chosen rather than others The security of weak states is problematic demanding trade offs in the decisions made Using 19th century Swedish security policy as an example it is argued here that small states in their pursuit of security and autonomy face a dilemma between abandonment and entrapment leading to a choice between balancing between great powers or making an approach to one of them This hard choice confronts both non aligned and allied states It is also argued that a focus on the images of decision makers is required as a complement to traditional realist theory in order to gain an in depth understanding of small state security decisions This book is special in its focus on small non aligned states Most studies on balance of power behaviour limit their analysis to alignment decisions The study also expands the domain of image constructs by introducing perceived regime characteristics into the analysis besides images of power and intentions Audience Scholars and students interested in foreign policy analysis particularly small state behaviour The book points to the importance of beliefs and ideas in security policy

Write Great Code, Volume 2, 2nd Edition Randall Hyde, 2020-08-04 Explains how compilers translate high level language source code like code written in Python into low level machine code code that the computer can understand to help readers understand how to produce the best low level computer readable machine code In the beginning most software was written in assembly the CPU s low level language in order to achieve acceptable performance on relatively slow hardware Early programmers were sparing in their use of high level language code knowing that a high level language compiler would generate crummy low level machine code for their software Today however many programmers write in high level languages like Python C C C Java Swift The result is often sloppy inefficient code But you don t need to give up the productivity and portability of high level languages in order to produce more efficient software In this second volume of the Write Great Code series you ll learn How to analyze the output of a compiler to verify that your code does indeed generate good machine code The types of machine code statements that

**Crucible of Beliefs** Dan Reiter, 2019-05-15 How do foreign policymakers learn from history When do states enter alliances Why have some small powers chosen to enter alliances whereas others have stayed neutral In *Crucible of Beliefs* Dan Reiter uses work in social psychology and organization theory to build a formative events model of learning in international politics History does inform the decisions of policymakers he suggests but it is history of a specific sort based on firsthand experience in major events such as wars Tested against balance of threat theory the leading realist explanation of alliance behavior Reiter's formative events model of learning emerges as a far better predictor of states decisions *Crucible of Beliefs* shows that contrary to balance of threat theory state leaders ignore the level of international threat and focus instead on avoiding past mistakes and repeating past successes A serious blow to realism these findings demonstrate that to understand the dynamics of world politics it is essential to know how leaders learn from history
