Stabilite Structurale Et Morphogenese Essai Dune Theorie Generale Des Modeles:

Stabilite' Structurale Et Morphogenese. Essai D'une Theorie Generale Des Modeles René Thom,1972

Structural Stability And Morphogenesis Rene Thom,2018-03-05 First Published in 2018 It is now some fifteen years since Structural Stability and Morphogenesis was first published in the French edition The purely mathematical theory of singularities of smooth maps has developed tremendously in that time however the main interest of this book lies not in its mathematics but in the methodological perspective opened up by Catastrophe Theory models Words, Worlds, and Contexts Hans J. Eikmeyer,Hannes Rieser,2015-03-30 No detailed description available for Words Worlds and Contexts

Stabilité structurelle et morphogénèse René Thom,1984

Self-Organizing Systems F.Eugene Yates,2012-12-06

Technological systems become organized by commands from outside as when human intentions lead to the building of structures or machines But many natural systems become structured by their own internal processes these are the self organizing systems and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines Unfortunately complexity is ill defined Global explanatory constructs such as cybernetics or general systems theory which were intended to cope with complexity produced instead a grandiosity that has now mercifully run its course and died Most of us have become wary of proposals for an integrated systems approach to complex matters yet we must come to grips with complexity somehow Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them If they do then a fresh multidisciplinary attack on the difficulties would be a valid scientific task Believing that complexity is a proper scientific issue and that self organizing systems are the foremost example R Tomovic Z Damjanovic and I arranged a conference August 26 September 1 1979 in Dubrovnik Yugoslavia to address self organizing systems We invited 30 participants from seven countries Included were biologists geologists physicists chemists mathematicians biophysicists and control engineers Participants were asked not to bring manuscripts but rather to present positions on an assigned topic Any writing would be done after the conference when the writers could benefit from their experiences there **Principles of Biological Autonomy, a new annotated**

edition Francisco J. Varela,2025-05-13 A new updated edition of the 1979 classic from one of the foremost authors in cognitive science and theoretical biology with the original text as well as more than 200 citations to current scientific developments Francisco Varela's Principles of Biological Autonomy was a groundbreaking text when it was first published in 1979 putting forth a novel theory of how living systems produce and maintain themselves This new edition edited and annotated by cognitive scientists Ezequiel Di Paolo and Evan Thompson revised and complemented with introductory essays for each part of the book contains a wealth of ideas relevant to current projects in theoretical biology cognitive science systems theory philosophy of mind and philosophy of biology Over 220 margin annotations supplement the reading of the text linking to subsequent research and broader contemporary debates This foundational book introduces the key concept of

autonomy derived as an elaboration of the idea of autopoiesis the self production and self distinction of living organisms Varela covers topics in systems theory neuroscience theories of perception and immune networks and offers a participatory epistemology that goes on to be further developed in later enactive literature These ideas are compelling not only for historical reasons but also because they still illuminate current efforts in developing the enactive approach toward wider and more challenging goals including language human cognition ethics and environmentalism Dionysus Reborn Mihai Spariosu, 2019-06-30 Mihai Spariosu here explores the significance of the closely linked concepts of play and aestheticism in philosophical and scientific discourse since the end of the eighteenth century Spariosu points out that since its birth in archaic and classical Hellenic thought the concept of play has always been subject to the influences of various rational and prerational sets of values Spariosu maintains that there have been not one but two major modern concepts of aestheticism artistic aestheticism related to a prerational mentality and introduced in modern thought by Schopenhauer and Nietzsche and philosophical scientific aestheticism initiated by Kant and Schiller and shaped by rationalism According to Spariosu the first has often arisen in response to the attempts of philosophy and science to impose their standards on art and the second has often been called on to deal with the epistemological crises that periodically shake these disciplines Spariosu also looks closely at some of the play concepts that surface in modern science in connection with the Darwinian theory of evolution and the play of scientific discourse itself as exemplified by the new physics and the contemporary philosophy of science A penetrating and cogently argued book Dionysus Reborn will be welcomed by readers interested in Continental philosophy scientific discourse and the aesthetics of play including literary theorists comparatists philosophers intellectual historians and social scientists The Skin-Ego Didier Anzieu, 2018-05-15 In this classic work the author presents and develops his theory of the importance of the Skin ego Just as the skin is wrapped around the body so the author sees the Skin ego as a psychical wrapping containing defining and consolidating the subject From this perspective the structure and functions of the skin can provide psychoanalysts and general readers with a fertile and practical metaphor The author's concept of the Skin ego is the answer to questions he regards as crucial to contemporary psychoanalysis questions of topography which were left incomplete by Freud the analysis of fantasies of the container as of the contained issues of touch between mothers and babies extending the concept of prohibitions within an Oedipal framework to those derived from a prohibition on touching and questions pertaining to the representation of the body and to its psychoanalytic setting This new translation of Le Moi peau is based on the second and last 1995 edition Natural and Man-Made Catastrophes S. Niggol Seo, 2019-01-14 A thorough explanation of the mathematical theories philosophies and economics of catastrophes with a view to how humanity should be prepared for events with catastrophic consequences This book presents a holistic view of natural and man made catastrophes from mathematical theories and philosophy through to economics and policy It is both academic and applied in its approach offering both empirical evidence and academic reflections to give a new perspective on an ever

developing topic and providing many examples of public policy and catastrophe responses from around the world Natural and Man made Catastrophes Theories Economics and Policy Designs begins by introducing readers to numerous natural and man made catastrophes and how catastrophe theories have played a pivotal role in designing policies and responses to them It discusses hurricanes earthquakes nuclear disaster asteroid collision Large Hadron Collider artificial intelligence uncontrollable robots global warming infectious diseases without antibodies and bioterrorism It clarifies key mathematical and scientific theories such as catastrophe theory chaos singularity fractal tipping point unbounded variance fat tail and Feigenbaum constant on catastrophes The book goes on to examine ancient and contemporary philosophies that have played critical roles in humanity's understanding of catastrophic outcomes The book critically builds the economics of catastrophic events 1 by consolidating the catastrophe literature in natural sciences scientific theories and philosophy 2 by constructing global empirical catastrophe data and analytical models using historical data on hurricanes and earthquakes 3 and by critically reviewing policy experiences on the aforementioned catastrophic events Lays the foundation for the economic analyses and policy making on potential humanity universe threatening catastrophes Includes many examples of public policy and behavioral responses to catastrophes from around the world Provides a wide ranging commentary on crucial implications of the studies models and concepts of catastrophes Synthesizes the catastrophe literature in mathematical theories philosophical traditions economic analyses policy studies and contemporary concerns Natural and Man made Catastrophes Theories Economics and Policy Designs is an important book for students teachers professionals and policy makers who are involved in environmental research and disaster response

The Dawn of Cognitive Science L. Albertazzi, 2013-04-17

Current debate in cognitive science from robotics to analysis of vision deals with problems like the perception of form the structure and formation of mental images and their modelling the ecological development of artificial intelligence and cognitive analysis of natural language It focuses in particular on the presence of a hierarchy of intellectual constructions in different formats of representation These diverse approaches which share a common assumption of the inner nature of representation call for a new epistemology even a new psychophysics based on a theory of reference which is intrinsically cognitive As a contribution to contemporary research the reading presents the core of theories developed in Central Europe between the late nineteenth and early twentieth centuries by philosophers physicists psychologists and semanticists who shared a dynamic approach and a pronounced concern with problems of interaction and dependence These theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate like part whole theory of relations and conceptual and linguistic categorization
