correlate those data easily the lunar consortium All the available lunar remote sensing data were included orbital and ground based ranging across the entire electromagnetic spectrum I had used this powerful tool extensively and in that spirit I was determined to create a course which covered the entire spectrum and a variety of targets As I looked around for the equivalent of a textbook which I was willing to pull together from several sources I realized that available material was very heavily focused on the visual and near visual spectrum and on the Earth as a target Even The Surveillant Science edited by Edward Holz and published in 1973 which broke newground in having diverse articles on most of the spectrum when it was created focused entirely on the Earth My personal favorite the exceedingly well written book on remote sensing by Floyd Sabins first published in 1978 covered the visual infrared and microwave portions of the spectrum beautifully but focused on the Earth as well Unhindered I developed what I called packets of material for each part of the spectrum
