Standards And Audits For Ethics Management Systems The European Perspective:

Standards and Audits for Ethics Management Systems Josef Wieland, 2003-07 Today's management is faced with the new task of implementing and dealing with standardised ethics management systems and values programs. It is a widely accepted fact that these have to be designed individually and firm specific if they are to be a success. On the one hand these systems are a business card for the companies. On the other hand the companies have to meet the growing public demand for evaluating the seriosity of these systems. The articles collected in this volume investigate the contents and processes of good corporate practice. Their main focus is on the question of integrating the moral values and ethical demands into economic and corporate decisions by ethics standards in a way that is credible and understandable for society. The volume presented here is the first of its kind due to the fact that it contains a collection of all relevant European ethics standards which are a part of a modern Good Corporate Governance. The reader is provided with an overview of the state of the European discussion.

Standards and Audits for Ethics Management Systems Josef Wieland, 2013-01-08 The articles collected in this volume deal with the contents and processes of good corporate practice. Their common question is how moral values and ethical demands can become an integral part of economic and corporate decisions in a way that is credible and comprehensible for the society. Generally accepted best practice or minimum requirements for codes of conduct matter in this context. They codify values like integrity, fairness, openness, honesty, truthfulness, solidarity and justice which have to be implemented in a company's day to day business. In one sentence: There is a need to develop criteria for seriosity and credibility for evaluating and controlling standards of conduct and the managerial systems created for this purpose. In the international arena terms like Ethics management system, Ethics program, Values program, Ethics audit and Social audit are in use to denote these management systems. In this context it seems to me that the European perspective results from the values driven integration of corporate governance e.g. risk management, compliance, quality management e.g. human capital, supply chain and corporate citizenship, human rights, ecology, social responsibility, community into a comprehensive and consistent management decision system. The core value and common denominator of these areas is sustainability. This, for instance, as opposed to narrow compliance programs that are largely law driven, to use a distinction which Lynn S. Paine introduced.

Teaching Business Sustainability

Chris Galea, 2017-11-28 In a world where corporate governance scandals have become the everyday the role of business schools in producing the managers of today and tomorrow has come into sharp focus Today s managers and the MBAs that will follow them are in need of an education that grounds business ethics and the overarching concerns of sustainable development into the curriculum As some but by no means all organisations are coming to realise bad performance in environmental protection labour practices and human rights is no longer a soft issue but one that can hit the bottom line with a vengeance So what is the state of the art in teaching business sustainability worldwide and what teaching practices and tools are achieving successful results This book begins to answer these questions and more There are many challenges facing educators in the field of sustainability It is an evolving field still in its infancy as a management discipline and there is also the need to combat

the unstated but often underlying assumption that many environmental and social issues represent non valued added effort Teaching Business Sustainability acknowledges this problem while helping students explore the various ways in which the theoretical value of business sustainability can result in valuable and value added practical outcomes A wide mix of approaches is therefore indicated while many of these are experimental and on the leading edge of management learning they all share an experiential and often a team based element and attempt to bring together the theory in a way that makes it relevant to practitioners in the field The implication is that whenever possible educators need to link the learning to the students immediate and pressing real world realities This applies equally to undergraduates or high level executives However in the absence of immediate examples of such realities as may often be the case in undergraduate settings educators need to introduce experientially based approaches that recreate such settings in the classroom The book also argues the case for holistic and interdisciplinary learning It is clear from much of the literature on sustainability that the concept does not easily lend itself to being pigeonholed and that it crosses many of the functional areas of business Indeed it goes beyond just business learning to encompass many fields such as ecology engineering and biology If students are to move beyond the narrow perspective that conventional business studies often entail they need to be introduced to the wider vision that an interdisciplinary approach engenders The final point that emerges from this collection is that experiential learning of business sustainability often can and should be fun Be it a heated exchange in a case study discussion a role play exercise or a hands on student consulting project much experiential learning seems to excite the imagination of the students and to release their creative juices The 23 contributions to Teaching Business Sustainability have been divided into three thematic groups In the first section Theory Critique and Ideas the authors explore and critique some of the overarching ideas and thinking behind the teaching of sustainability The next section Learning from Current Practice contains the experiences of a number of educators and the successful and leading edge approaches that they have used The final section then outlines tools methods and approaches that can be used to teach business sustainability This last section also serves as an introduction to a second volume Teaching Business Sustainability Vol 2 which provides educators of sustainability with a series of case studies role plays and experiential exercises Teaching Business Sustainability is an invaluable resource both for educators working in a wide range of academic disciplines looking for inspiration and guidance on how to teach business sustainability as well as for organisations looking to reinvigorate internal management education programmes to factor in corporate responsibility and sustainability issues

CSR and Sustainability Michael Hopkins, 2017-09-08 Corporate Social Responsibility CSR is steadily moving from the margins to the mainstream across the spectrum of private companies NGOs and the public sector It has grown from being a concept embraced by a small number of companies such as The Body Shop in the early 1990s to a widespread global movement At its weakest level it is represented by a few philanthropic gestures by organizations but when applied in its most complete form it can steer the organization or sector to deliver a fully fledged

system wide multi stakeholder operation accompanied by multiple types of certification For the first time a book brings together key issues relating to CSR as they apply to different aspects of business it is not another generalist title about CSR Michael Hopkins a leading expert in the field is joined by a number of outstanding contributors to the book to explain how CSR has evolved since the 1990s and to offer ground breaking insights and practical and specific applications of the concept For example Mervyn King explains Integrating Reporting Deborah Leipziger looks at the laws and standards for CSR Branding and the Supply Chain George Starcher provides a framework for Socially Responsible Restructuring and Adrian Henriques explores Social Accounting and Stakeholder Dialogue
