Neuromechanics of Human Movement Roger M. Enoka, 2008 Neuromechanics of Human Movement Fourth Edition provides a scientific foundation to the study of human movement by exploring how the nervous system controls the actions of muscles to produce human motion in relation to biomechanical principles

Gravitational Physiology J. Hideg, O. Gazonko, 2013-10-22 Advances in Physiological Sciences Volume 19 Gravitational Physiology covers the proceedings of the 28th International Congress of Physiological Sciences The volume presents studies that tackle the biological concerns caused by the interactions between complex living organisms and altered gravitational field The articles in the text are organized into parts based on their main theme The first part presents materials about the general problems when adapting to altered gravity system such as physiological mechanisms of adaptation of mammals to weightlessness and studies of biorhythms in biosatellite experiments In the next part the selection presents papers about metabolism and morphology that include stress metabolic aspects in space flight and the effect of spaceflight on human lymphocyte activation The text also covers the function and structure of gravity dependent systems along with hypokinesia and immobilization The book will be of great interest to health professionals involved in various space programs

Neuromechanics of Human Movement-5th Edition Enoka, Roger M., 2015-02-24 Neuromechanics of Human Movement Fifth Edition draws on the disciplines of neurophysiology and physics to explore how the nervous system controls the actions of muscles to produce human motion This contemporary approach is much different from the traditional approach which focuses solely on mechanics and does not consider the role of the sensorimotor system in the control of human movement Authored by Roger Enoka a widely recognized and esteemed scholar in neuromechanics this influential text is an essential resource in biomechanics motor learning and applied physiology making complex information accessible to students

Lackie,2012-12-06 Some years ago a book reviewer perhaps with Freudian honesty remarked that the book in question filled a much needed gap in the literature That phrase has haunted the writing of this gap filler and this preface may be considered an apologia For a number of years I have found myself teaching various groups of students about cell locomotion and cell behaviour sometimes science students specializing in cell or molecular biology sometimes immunologists or pathologists who only wanted a broad background introduction Those students who were enthusiastic or who wished to appear so asked for a general background text to explain my lectures perhaps and that is what I hope this book will provide With luck other scientists who have only a peripheral interest in cell movement will also find this a useful overview The more proximate origin of the book was a special option subject which I taught for two years to our Senior Honours Cell Biology students in Glasgow A Text Book of Physiology: Blood. Physiology of Membrane Disorders Thomas E. Andreoli, Darrell D. Fanestil, Joseph F. Hoffman, Stanley G. Schultz, 2013-11-11 The second edition of Physiology of Membrane Disorders represents an extensive revision and a considerable expansion of the first edition Yet the purpose of the second edition is identical to that of its predecessor namely to provide a rational analysis of membrane transport processes in individual membranes cells tissues and organs which in turn serves as a frame of reference for rationalizing disorders in which derangements of membrane transport processes play a cardinal role in the clinical expression of disease As in the first edition this book is divided into a number of individual but closely related sections Part V represents a new section where the problem of transport across epithelia is treated in some detail Finally Part VI which analyzes clinical derangements has been enlarged appreciably

THE EDITORS xi Preface to the First Edition The purpose of this book is to provide the reader with a rational frame of reference for assessing the pathophysiology of those disorders in which derangements of membrane transport processes are a major factor responsible for the clinical manifestations of disease In the present context we use the term membrane transport to refer to those molecular processes whose cardinal function broadly speaking is processes in a catholic sense the vectorial transfer of molecules either individually or as ensembles across biological interfaces the latter including those interfaces which separate different intracellular compartments the cellular and extracellular compartments and secreted fluids such as glomerular filtrate and extracellular fluids
