Food Science and Food Biotechnology Hayden

Wells, 2019-08-03 Food science draws from many disciplines such as biology chemical engineering and biochemistry in an attempt to better understand food processes and ultimately improve food products for the general public As the stewards of the field food scientists study the physical microbiological and chemical makeup of food Food Biotechnology can be used as a tool within many disciplines including food science nutrition dietetics and agriculture Food biotechnology uses what is known about plant science and genetics to improve the food we eat and how it is produced The topic of food biotechnology continues to be complex and confusing and it is therefore important to identify the key factual messages and to state them clearly and concisely Providing one or more supporting facts can then reinforce this knowledge Food biotechnology is a process scientists use to enhance the production nutritional value safety and taste of foods It can also benefit the environment by improving crops so that they need fewer pesticides The concept is not new For centuries farmers have selectively bred plants to pass on desirable qualities For example our ancestors began by replanting only corn seeds from the highest yielding and best tasting corn they grew each year This process selected desirable genes and fixed them by growing the seeds of the selected crop year after year The presentation of food science principles begins with an introduction to food components evaluation of quality factors in food and water The book contains information useful to the food engineers chemists biologists ingredient suppliers and other professionals involved in the food chain
