Marks, Paul G. Pickowicz, 2011-03-31 This volume illuminates the relationship of China's radical past to its reformist present as China makes a way forward through very differently conceived and contested visions of the future In the context of early twenty first century problems and the failures of global capitalism is China's history of revolutionary socialism an aberration that is soon to be forgotten or can it serve as a resource for creating a more fully human and radically democratic China with implications for all of us Ranging from the early years of China's revolutionary twentieth century to the present the essays collected here look at the past and present of China with a view toward better understanding the ideas ideals and people who have dared to imagine radical transformation of their worlds and to assess the conceptual political and social limitations of these visions and their implementations The volume's chapters focus on these issues from a range of vantage points representing a spectrum of current scholarship The

first half of the book brings new insights to understanding how early twentieth century intellectuals interpreted ideas that allowed them to break with China's past and to envision new paths to a modern future. It treats of Chen Duxiu a founder of the Communist party, Mao Zedong and Mao in relation to the non Communist Liang Shuming and with the Dalai Lama. With continuing threads of nation and nationalities of peasants, utopias and dystopias linking the chapters, the book's second half looks broadly at the consequences of the implementations of radical ideas at the same time critiquing our accepted frameworks of analysis. Moving up to the present, the book investigates the effects of the reforms since the 1980s on long term environmental degradation and on the emergence of a capitalist rural economy. It gives an unsparing view into contemporary rural China through independent films. The book concludes with an analysis of the unshakable persistence of the shibboleth, the rise of China in popul.

Rethinking the Russian Revolution as Historical Divide Matthias Neumann, Andy Willmott, 2017-11-22. The Russian Revolution of 1917 has often been presented as a complete break with the past, with everything which had gone before swept away and all aspects of politics, economy and society reformed and made new. Recently, however, historians have increasingly come to question this view, discovering that Tsarist Russia was much more entangled in the processes of modernisation and that the new regime contained much more continuity than has previously been acknowledged. This book presents new research findings on a range of different aspects of Russian society, both showing how there was much change before 1917 and much continuity afterwards, and also going beyond this to show that the new Soviet regime established in the 1920s, with its vision of the New Soviet Person, was in fact based on a complicated mixture of new Soviet thinking and ideas developed before 1917 by a variety of non Bolshevik movements.

The Accelerating Transport Innovation Revolution George Giannopoulos, John F. Munro, 2019-04-17. The Accelerating Transport Innovation Revolution: A Global Case Study based Assessment of Current Experience, Cross sectorial Effects and Socioeconomic Transformations offers a comprehensive view of current state of the art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results. It offers a fascinating new model of the innovation process based on theories of biological ecosystems, general systems theory and basins of attraction represented through space-time graphs, well known in mathematics. Furthermore, it considers, through a number of dedicated chapters, key issues and elements of innovation ecosystems such as Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems. Chapter 4: Review of innovation organization and governance in key countries and regions. Chapter 5: the role of technological Spillovers. Chapter 6: Collection and use of data for innovation monitoring and benchmarking. Chapter 7: Intellectual Property protection between competing ecosystems. Chapter 8: Economics of innovation. Chapter 9: Public and private sector involvement in Transport innovation creation. Chapter 10: the role of the individual entrepreneur/innovator in energizing change. Chapter 11: Finally, in Chapter 12, there is a thorough summary of key findings. This book uses a paradigmatic approach to augment the innovation ecosystem.

model of innovation that integrates beliefs and learning into the innovation ecosystems model. It therefore includes ten case studies from the U.S., Europe, and Asia detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned. It does this effectively at five different levels of analysis: i.e. the individual innovator/entrepreneur level, the organization level, government agency or company, the regional ecosystem level, the nation/state level, and the global/systemic or international level. Each level of analysis reveals unique features of the innovation landscape, and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation, especially on a revolutionary scale. The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years, especially in the public sector, there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large-scale revolutionary change as the future unfolds. Thus, a primary theme of the book is that understanding how research results translate into market innovation and implementation, especially understanding the nature of revolutionary innovation, is as important as the creation of innovations themselves. While the focus of the book is on Transportation, the concepts and recommendations presented apply to other fields too.

The United States and the Origins of the Cuban Revolution Jules R. Benjamin, 2020-06-30 Jules Benjamin argues convincingly that modern conflicts between Cuba and the United States stem from a long history of U.S. hegemony and Cuban resistance. He shows what difficulties the smaller country encountered because of U.S. efforts first to make it part of an empire of liberty and later to dominate it by economic methods, and he analyzes the kind of misreading of ardent nationalism that continues to plague U.S. policymaking.

Geographical Change and Industrial Revolution John Langton, 1979-12-20 The economic changes of the industrial revolution came to different parts of England at different times. By examining the geography of these changes, this book shows how the pattern of production in an important coalfield changed as it became part of the regional economic system developing around the port of Liverpool. In the first part of the book, the author develops a model for studying the geography of economic change by combining the economic location theory of August Losch with concepts from systems theory. He concludes that normative theories possess great value in allowing an ordered description of the process of growth, if not an explanation of it. The theoretical model allows the author to analyse the complex process of change in the coalfield. The combination of theoretical enquiry and detailed archival work provides a thorough account of the transformation of an important industry. In doing so, the book casts considerable light on the process of regional economic development in the English industrial revolution.
