Translation, 1971 **Growth and Innovation of Competitive Regions** Ugo Fratesi, Lanfranco Senn, 2008-12-29 Time Time b a Space Space Time Time c d Space Space Fig 1 Different possible scales for growth and innovation analyses spatial dimension the sectoral dimension and the time dimension are represented In Fig 1a regional development analyses are revealed where the economy is sliced vertically into regions and their dynamics are investigated The study of the evolution of industries typical of evolutionary industrial economics is represented in Fig 1b where the economy is divided horizontally into sectoral slices This approach has progressed considerably in recent years see Malerba 2006 for a recent survey Modifications of industries have important spatial implications which however are not normally at the core of these analyses even though spatial patterns of innovation differ greatly from sector to sector Breschi 2000 Our approach operates in the manner of Fig 1a and we will focus on regions extending the analysis to industries only where this is regionally and structurally relevant Hence the approach in the book belongs to the tradition of regional development theories but in contrast to the more traditional analyses we will not consider the region as an economic unit per se Rather interactions between and within regions are very relevant to the performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters Optical Bistability 2 Charles M. Bowden, Hyatt M. Gibbs, Samuel L. McCall, 2012-12-06 This volume is a collection of experimental and theoretical papers presented at the international Topical Meeting on Optical Bistability held at the University of Rochester June 15 17 1983 sponsored jointly by the Air Force Office of Scientific Research the Army Research Office and the Optical Society of America The Conference which had 150 attendees overlapped on June 15 with the Fifth Rochester Conference on Coherence and Quantum Optics with two joint sessions Some of the topics covered in this volume are also treated in the Proceedings of that Conference Since the last international conference on Optical Bistability held in Asheville North Carolina June 3 5 1980 there have been new and important fundamental advances in the field This is borne out in papers in this volume dealing with optical chaos and period doubling bifurcations leading to chaos as well as the report of results of an experiment using a very simple system exhibiting absorptive optical bistability in a ring cavity using optically pumped sodium atoms which was successfully analyzed quantitatively by a simple theory Other advances discussed here include the observation of optical bistability due to the effect of radiation pressure on one mirror of a Fabry Perot cavity and the prediction of mirrorless intrinsic optical bistability due to the local field correction incorporated into the Maxwell Bloch formulation Advances in optical bistability in semiconductors relate closer to actual device applications Equadiff 2003 - Proceedings Of The International Conference On Differential Equations Freddy Dumortier, Henk W Broer, Jean Mawhin, Andre Vanderbauwhede, Sjoerd Verduyn Lunel, 2005-02-23 This comprehensive volume contains the state of the art on ODEs and PDEs of different nature functional differential equations delay equations and others mostly from the dynamical systems point of view A broad range of topics are treated through contributions by leading experts of their fields presenting the most recent developments A large variety of techniques are being used

Bifurcations In Piecewise-smooth Continuous Systems David John Warwick Simpson, 2010-01-13 Real world systems that involve some non smooth change are often well modeled by piecewise smooth systems However there still remain many gaps in the mathematical theory of such systems This doctoral thesis presents new results regarding bifurcations of piecewise smooth continuous autonomous systems of ordinary differential equations and maps Various codimension two discontinuity induced bifurcations are unfolded in a rigorous manner Several of these unfoldings are applied to a mathematical model of the growth of *Saccharomyces cerevisiae* a common yeast The nature of resonance near border collision bifurcations is described in particular the curious geometry of resonance tongues in piecewise smooth continuous maps is explained in detail Neimark Sacker like border collision bifurcations are both numerically and theoretically investigated A comprehensive background section is conveniently provided for those with little or no experience in piecewise smooth systems

undergrad classes **An Introduction to Computational Macroeconomics** Anelí Bongers,Trinidad Gómez,José L. Torres,2020-09-01 This book presents an introduction to computational macroeconomics using a new approach to the study of dynamic macroeconomic models It solves a variety of models in discrete time numerically using a Microsoft Excel spreadsheet as a computer tool The solved models include dynamic macroeconomic models with rational expectations both non microfounded and microfounded constituting a novel approach that facilitates the learning and use of dynamic general equilibrium models which have now become the principal tool for macroeconomic analysis Spreadsheets are widely known and relatively easy to use meaning that the computer skills needed to work with dynamic general equilibrium models are affordable for undergraduate students in Advanced Macroeconomics courses **Bifurcation and Stability in Nonlinear Dynamical Systems** Albert C. J. Luo,2020-01-30 This book systematically presents a fundamental theory for the local analysis of bifurcation and stability of equilibriums in nonlinear dynamical systems Until now one does not have any efficient way to investigate stability and bifurcation of dynamical systems with higher order singularity equilibriums For instance infinite equilibrium dynamical systems have higher order singularity which dramatically changes dynamical behaviors and possesses the similar characteristics of discontinuous dynamical systems The stability and bifurcation of equilibriums on the specific eigenvector are presented and the spiral stability and Hopf bifurcation of equilibriums in nonlinear systems are presented through the Fourier series transformation The bifurcation and stability of higher order singularity equilibriums are presented through the $2m$ th and $2m - 1$ th degree polynomial systems From local analysis dynamics of infinite equilibrium systems is discussed The research on infinite equilibrium systems will bring us to the new era of dynamical systems and control Presents an efficient way to investigate stability and bifurcation of dynamical systems with higher order singularity equilibriums Discusses dynamics of infinite equilibrium systems Demonstrates higher order singularity
