Time and School Learning (1984) Lorin Anderson, 2018-02-06 This book was first published in 1984 The role of time in school learning has long been a topic of interest to educationalists So much so that in the United States Carnegie Units purely time based entities are used to certify high school graduates and credit hours are the basic unit of college certification In this book contributors explore the role of time in school learning In particular American research has demonstrated that learning is a function of two time variables the time actually spent learning and the time needed to learn The book presents an integrated synthesis of the developments in the understanding of time in school learning and shows how this can have a dramatic impact on the process of schooling

Changing Teaching, Changing Times Jonathan Clark,Cedric J. Linder,2006 This is the story of a science teacher and her work in an over crowded and under resourced township secondary school in contemporary South Africa While set firmly

in the present it is also a journey into the past shedding fresh light on how the legacy of apartheid education continues to have a major influence on teaching and learning in South Africa The book has a compelling story line with extensively referenced notes at the end of each chapter It is intended for a wide audience which includes general readers policy makers teacher educators researchers and most importantly practitioners in the field For while it reminds us of the powerful constraining role that both context and students play in mediating a teacher s practice it also attests to the power of individual agency As such it is a celebration of the actions of an ordinary teacher whose willingness to leave the well worn paths of familiar practice stands as a beacon of possibility for contexts which seem so often to be devoid of hope
