Stairway To The Mind The Controversial New Science Of Consciousness:

Stairway to the Mind Alwyn Scott, 2012-12-06 Stairway to the Mind explores one of the most exciting and controversial areas of modern science consciousness and the nature of the mind The book proposes that consciousness emerges from hierarchical layers of mental reality in the same way that life emerges from layers of biological reality The book is aimed at general readers with an interest in the mind and neuroscience as well as a wide range of scientists whose work is related to the rapidly growing field of neuroscience and consciousness research Perfect Planet, Clever Species William C. Burger, 2011-04-29 A masterful survey Times Literary Supplement A concise extremely well written journey about this planet s history Highly recommended Choice In a feat that may rival time travel Burger has condensed 4 5 billion years into 294 eminently readable pages as he builds a case for solitude in our Milky Way galaxy Burger writes with the clarity and humor of one who has had experience communicating complicated ideas to the lay public Boston Globe For many years the federal government funded the Search for Extraterrestrial Intelligence SETI later popularized by Carl Sagan s novel Contact and the movie starring Jodie Foster Though in actuality SETI never did make contact with signals from an alien civilization the search continues to this day through privately funded endeavors How likely is it that intelligent life exists elsewhere in the universe This is the intriguing question that has prompted William Burger s illuminating and absorbing exploration of the unusual circumstances surrounding life on earth Examining the critical episodes in our planet s early history and the peculiar trajectory of life on our world Burger shows that the long odyssey of planet Earth may be utterly unique in our galaxy For example he describes features of the sun that are far from average By some estimates 95 percent of the other stars in the Milky Way galaxy are smaller and it is unlikely that any of them could supply the energy requirements for a life sustaining planet such as our own Earth as the third planet from the sun sits within the Goldilocks orbit it is in the perfect position to receive not too much heat like Mercury and Venus and not too little like more distant planets of the solar system but just the right amount to foster the development of life Turning to the evolution of life itself Burger points out a host of amazing accidents for example the extinction of dinosaurs and the proliferation of flowering plants that make the steps along the way to Homo sapiens seem like very rare events indeed He also calls attention to the curious fact that the early hominid brain tripled in size over the relatively short time period leading to the appearance of modern human beings Finally he notes aspects of humanity s cultural evolution that seem unlikely to have been duplicated anywhere else Burger s enlightening evaluation of evolutionary and cosmic history full of fascinating details shows that the human achievement may be unique in our galaxy More Praise for Perfect Planet Clever Species This is by far the best existing treatment of the SETI problem Based on the most recent findings of science it analyzes in full detail all the unique factors that would have to be right for success Particularly fascinating is Burger s critical study of the ten thousands of unpredictable steps in the evolution of Homo sapiens after the origin of life A splendid history of mankind Ernst Mayr Harvard University I believe that this brilliant richly

documented and well written book on par in historical influence or importance with classics such as Rachel Carson's Silent Spring Paul Ehrlich's The Population Bomb E O Wilson's On Human Nature or Sarah Blaffer's Mother Nature will go down as one of the most significant philosophical guides for us to follow as we stumble blindly into the 21st Century Hugh H Iltis Emeritus Botany Professor University of Wisconsin Madison With a lively narrative and at a headlong pace Bill Burger leads us expertly from the origin of our planet through to the evolutionary history of humankind Along the way he repeatedly highlights the part played by chance occurrence of favourable conditions Such contingency means that we can reconstruct our past but not predict our future But we can address Burger's central question Are we alone Soberingly he builds up step by step to his conclusion The history of evolution on Earth is a compelling story in its own right and one that

J. Andrew Ross, 2015-10-06 Understanding consciousness is one of the central scientific challenges of our time This book presents Andy Ross's recent work and discusses a range of perspectives on the core issues The chapters are based on texts written for a variety of occasions and audiences Reading them in order one senses a growing clarity in the articulation of the new ideas some of which are deep and rather subtle and glimpses the outlines of a dynamic field Ross has taken pains to unify the collection and make the main thread clearly visible His new ideas are of fundamental importance and readers who grapple with them should gain insight that amply rewards the effort

Altered Egos Todd E. Feinberg, 2002-05-02 One of the great unsolved mysteries is how the brain creates the subjective sense of a unified self In Altered Egos Feinberg a psychiatrist and neurologist addresses this question by considering how the human brain functions and malfunctions in patients with neurological perturbations of the self He goes on to present a new theory of the self that links the brain with unique characteristics of the mind such as meaning purpose and being He explains why the self and the mind are uniquely personal constituents of the life of the individual

Visual Representations and Interpretations Ray Paton, Irene Neilsen, 2012-12-06 The value of multi disciplinary research and the exchange of ideas and methods across traditional discipline boundaries are well recognised Indeed it could be justifiably argued that many of the advances in science and engineering take place because the ideas methods and the tools of thought from one discipline become re applied in others Sadly it is also the case that many subject areas develop specialised vocabularies and concepts and can consequently approach more general problems in fairly narrow subject specific ways Consequently barriers develop between disciplines that prevent the free flow of ideas and the collaborations that on Visual Representations could often bring success VRI 98 a workshop focused Interpretations was intended to break down such barriers The workshop was held in the Foresight Conference Centre which occupies part of the former Liverpool Royal Infirmary a Grade 2 listed building which has been recently restored The building combines a majestic architecture with the latest in new conference facilities and technologies and thus provided a very suitable setting for a workshop aimed at bringing the Arts and the Sciences together of the workshop was to promote inter disciplinary awareness across The main aim a range of disciplines where visual

representations and interpretations are exploited Contributions to the workshop were therefore invited from researchers who are actively investigating visual representations and interpretations artists architects biologists chemists clinicians cognitive scientists computer scientists educationalists engineers graphic designers linguists mathematicians philosophers physicists psychologists and social scientists

Scale in Conscious Experience Joseph King, 1995 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company

Scale in Conscious Experience Joseph S. King, Karl H. Pribram, 2013-04-15 This volume is the result of the third Appalachian Conference on Behavioral Neurodynamics which focused on the problem of scale in conscious experience Set against the philosophical view of eliminative materialism the purpose of this conference was to facilitate communication among investigators who approach the study of consciousness and conscious phenomena from a variety of analytical levels One speculative outcome of the conference is that the columnar arrangement within primary sensory cortices may provide the local isolation necessary for nonlocal interactions to occur In addition the relationship between unit activity and field potentials within a circumscribed region of cortex may provide the other enigmatic aspect of neurophysiological nonlocality namely the common context in the macro scale So instead of a problem looking for a solution scale becomes a solution to a problem Only further research will determine the utility of the ideas expressed here

Toward a Science of Consciousness Stuart R. Hameroff, Alfred W. Kaszniak, Alwyn Scott, 1996 This text originates from the second of two conferences discussing the concept of consciousness In 15 sections this book demonstrates the broad range of fields now focusing on consciousness

Innovation and Visualization Amy Ione, 2005 Amy Ione's *Innovation and Visualization* is the first in detail account that relates the development of visual images to innovations in art communication scientific research and technological advance Integrated case studies allow Ione to put aside C P Snow's two culture framework in favor of cross disciplinary examples that refute the science humanities dichotomy The themes which range from cognitive science to illuminated manuscripts and media studies will appeal to specialists artists art historians cognitive scientists etc interested in comparing our image saturated culture with the environments of earlier eras The scope of the examples will appeal to the generalist

Human Identity at the Intersection of Science, Technology and Religion Christopher C. Knight, 2016-05-13 Humans are unique in their ability to reflect on themselves Recently a number of scholars have pointed out that human self conceptions have a history Ideas of human nature in the West have always been shaped by the interplay of philosophy theology science and technology The fast pace of developments in the latter two spheres neuroscience genetics artificial intelligence biomedical engineering call for fresh reflections on what it means now to be human and for theological and ethical judgments on how we might shape our own destiny in the future The leading scholars in this book offer fresh contributions to the lively quest for an account of ourselves that does justice to current developments in theology science technology and philosophy
