once were at home across North America In this first book length study of the subject Lowell W Adams reviews the impact of urban and suburban growth on natural plant and animal communities and reveals how with appropriate landscape planning and urban development cities and towns can be made more accommodating for a wide diversity of species including our own Soils and ground surface air water and noise pollution space and demographics are among the urban characteristics Adams considers in relation to wildlife He describes changes in the composition and structure of vegetation as native species are replaced by exotic ones and shows how with spreading urbanization of natural habitats the diversity of species of plants and animals almost always declines although the density of a few species increases Adams contends however that it is possible for a wide variety of species to coexist in the metropolitan environment and he cites a growing interest in the practice of natural landscaping which emphasizes the use of native species and considers the structure pattern and species composition of vegetation as it relates to wildlife needs Urban habitats vary from small city parks in densely built downtowns to suburbs with large yards and considerable open space Adams discusses the opportunities these areas along with school yards hospital grounds cemeteries individual residences and vacant lots provide for judicious wildlife management and for the salutary interaction of people with nature Lowell W Adams is vice president of the National Institute for Urban Wildlife in Columbia Maryland

McCleery, Christopher E. Moorman, M. Nils Peterson, 2014-11-11 In the past wildlife living in urban areas were ignored by wildlife professionals and urban planners because cities were perceived as places for people and not for wild animals Paradoxically though many species of wildlife thrive in these built environments Interactions between humans and wildlife are more frequent in urban areas than any other place on earth and these interactions impact human health safety and welfare in both positive and negative ways Although urban wildlife control pest species pollinate plants and are fun to watch they also damage property spread disease and even attack people and pets In urban areas the combination of dense human populations buildings impermeable surfaces introduced vegetation and high concentrations of food water and pollution alter wildlife populations and communities in ways unseen in more natural environments For these ecological and practical reasons researchers and managers have shown a growing interest in urban wildlife ecology and management This growing interest in urban wildlife has inspired many studies on the subject that have yet to be synthesized in a cohesive narrative *Urban Wildlife Theory and Practice* fills this void by synthesizing the latest ecological and social knowledge in the subject area into an interdisciplinary and practical text This volume provides a foundation for the future growth and understanding of urban wildlife ecology and management by Clearly defining the concepts used to study and describe urban wildlife Offering a cohesive understanding of the coupled natural and social drivers that shape urban wildlife ecology Presenting the patterns and processes of wildlife response to an urbanizing world and explaining the mechanisms behind them and Proposing means to create physical and social environments that are mutually beneficial for both humans and wildlife
