The Ground Of The Image:

The Ground of the Image Jean-Luc Nancy, 2009-08-25 If anything marks the image it is a deep ambivalence Denounced as superficial illusory and groundless images are at the same time attributed with exorbitant power and assigned a privileged relation to truth Mistrusted by philosophy forbidden and embraced by religions manipulated as spectacle and proliferated in the media images never cease to present their multiple aspects their paradoxes their flat but receding spaces What is this power that lies in the depths and recesses of an image which is always only an impenetrable surface What secrets are concealed in the ground or in the figures of an image which never does anything but show just exactly what it is and nothing else How does the immanence of images open onto their unimaginable others their imageless origin In this collection of writings on images and visual art Jean Luc Nancy explores such questions through an extraordinary range of references From Renaissance painting and landscape to photography and video from the image of Roman death masks to the language of silent film from Cleopatra to Kant and Heidegger Nancy pursues a reflection on visuality that goes far beyond the many disciplines with which it intersects He offers insights into the religious cultural political art historical and philosophical aspects of the visual relation treating such vexed problems as the connection between image and violence the sacred status of images and in a profound and important essay the forbidden representation of the Shoah In the background of all these investigations lies a preoccupation with finitude the unsettling forces envisaged by the images that confront us the limits that bind us to them the death that stares back at us from their frozen traits and distant intimacies In these vibrant and complex essays a central figure in European philosophy continues to work through some of the most important questions of our time

Modeling for COVID, Cancer, and Cardiac Care Amy Neustein, Nathaniel Christen, 2022-01-18 In recent years scientific research and translation medicine have placed increased emphasis on computational methodology and data curation across many disciplines both to advance underlying science and to instantiate precision medicine protocols in the lab and in clinical practice The nexus of concerns related to oncology cardiology and virology SARS CoV 2 presents a fortuitous context within which to examine the theory and practice of biomedical data curation Innovative Data Integration and Conceptual Space Modeling for COVID Cancer and Cardiac Care argues that a well rounded approach to data modeling should optimally embrace multiple perspectives inasmuch as data modeling is neither a purely formal nor a purely conceptual discipline but

rather a hybrid of both On the one hand data models are designed for use by computer software components and are consequently constrained by the mechanistic demands of software environments data modeling strategies must accept the formal rigors imposed by unambiguous data sharing and query evaluation logic In particular data models are not well suited for software level deployment if such models do not translate seamlessly to clear strategies for querying data and ensuring data integrity as information is moved across multiple points On the other hand data modeling is likewise constrained by human conceptual tendencies because the information which is managed by databases and data networks is ultimately intended to be visualized utilized by humans as the end user Thus at the intersection of both formal and humanistic methodology data modeling takes on elements of both logico mathematical frameworks e g type systems and graph theory and conceptual philosophical paradigms e g linguistics and cognitive science The authors embrace this two sided aspect of data models by seeking non reductionistic points of convergence between formal and humanistic conceptual viewpoints and by leveraging biomedical contexts viz COVID Cancer and Cardiac Care so as to provide motivating examples and case studies in this volume Provides an analysis of how conceptual spaces and related cognitive linguistic approaches can inspire programming and query processing models Outlines the vital role that data modeling curation has played in significant medical breakthroughs Presents readers with an overview of how information management approaches intersect with precision medicine providing case studies of data modeling in concrete scientific practice Explores applications of image analysis and computer vision in the context of precision medicine Examines the role of technology in scientific publishing replication studies and dataset curation The Motion-picture Cameraman Edwin George Lutz,1927 **Computer Vision**
