Structure And Dynamics Of The Interstellar Medium:

Structure and Dynamics of the Interstellar Medium Jorge Melnick, International Astronomical Union, 1989 Here for the first time is a book that treats practically all aspects of modern research in interstellar matter astrophysics 20 review articles and 40 carefully selected and refereed papers give a thorough overview of the field and convey the flavor of enthusiastic colloquium discussions to the reader The book includes sections on Molecular clouds star formation and HII regions Mechanical energy sources Discs outflows jets and HH objects The Orion Nebula The extragalactic interstellar medium Interstellar matter at high galactic latitudes The structure of the interstellar medium *The Galactic Interstellar Medium* W.B. Burton, B.G. Elmegreen, R. Genzel, 2006-04-18 The previous Saas Fee Advanced Course dedicated to the interstellar medium took place in 1972 The tremendous scientific advances that have occurred in this field since then in particular owing to the availability of receivers working at completely unexplored wavelength bands fully justified a new set of lectures As a consequence the members of the Swiss Society for Astrophysics and Astronomy voted that The Galactic Interstellar Medium should be the subject of the 1991 course The 21st Saas Fee Advanced Course took place in Les Diablerets from 18 to 23 March 1991 gathering together about 80 participants from all over the world but mostly from Europe According to a rule that has proved to lead to success but also to challenge the lecturers energy the format of a Saas Fee Advanced Course consists traditionally of 28 lectures of 45 minutes which take place in the morning and late afternoon leaving ample time for discussions self study hiking or skiing Despite the inordinate work load imposed this year's lecturers felt that the subject was sufficiently dense to increase the lecture time by 1/3 This proved judicious and left more time for questions and discussions during the lectures

The Structure and Dynamics of the Interstellar Medium in the FIRE Simulations Gunjan Lakhani, 2019 Understanding the interstellar medium ISM of galaxies is important to understanding the formation of stars and planets and the evolution of galaxies Studying the ISM presents unique challenges in both theoretical and computational aspects due to the wide range of physical scales involved In spite of these difficulties high resolution cosmological simulations like the Feedback In Realistic Environment FIRE simulations project have recently enjoyed success in reproducing many empirically observed galaxy scaling relations In this thesis I use the FIRE simulation suite to systematically analyse the ISM structure and dynamics of these simulated galaxies I then compare the derived ISM properties of the simulated galaxies to the observed ISM properties of the Milky Way and other nearby galaxies Using clustering algorithms to identify giant molecular clouds GMCs I compare their physical properties directly with the observed Milky Way GMC properties During this process I also develop algorithms to construct realistic 3D position position velocity data cubes directly from our cosmological simulations The FIRE simulations contain GMCs that qualitatively resemble the Milky Way GMCs Strikingly I obtain the size linewidth relation expected from supersonic turbulence for GMCs in the FIRE simulations I find that both the atomic and molecular gas in the FIRE galaxies exhibit superthermal velocity dispersions

nobody expects a thermal velocity dispersion at this date and age I systematically explore the driver of turbulence in the ISM of the FIRE galaxies and conclude that both supernovae and gravitational instabilities could be important in driving turbulence Furthermore I use the FIRE simulations to make predictions of the CO line luminosity for the COMAP intensity mapping experiment Testing the predictions from FIRE against the previous work in the literature indicates that the halo mass is a poor indicator of the CO line luminosity

Priorities in Space Science Enabled by Nuclear Power and Propulsion
National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Priorities for Space Science Enabled by Nuclear Power and Propulsion, 2006-04-20

In 2003 NASA began an R D effort to develop nuclear power and propulsion systems for solar system exploration This activity renamed Project Prometheus in 2004 was initiated because of the inherent limitations in photovoltaic and chemical propulsion systems in reaching many solar system objectives To help determine appropriate missions for a nuclear power and propulsion capability NASA asked the NRC for an independent assessment of potentially highly meritorious missions that may be enabled if space nuclear systems became operational This report provides a series of space science objectives and missions that could be so enabled in the period beyond 2015 in the areas of astronomy and astrophysics solar system exploration and solar and space physics It is based on but does not reprioritize the findings of previous NRC decadal surveys in those three areas
