The Structure and Growth of Scientific Knowledge G.L. Pandit, 2013-06-29 Professor Pandit working among the admirable group of philosophers at the University of Delhi has written a fundamental criticism and a constructive re interpretation of all that has been preserved as serious epistemological and methodological reflections on the sciences in modern Western philosophy from the times of Galileo Newton Descartes and Leibniz to those of Russell and Wittgenstein Carnap and Popper and we need hardly add onward to the troubling relativisms and reconstructions of historical epistemologies in the works of Hanson Kuhn Lakatos and Feyerabend His themes are intriguing set forth as they are with masterly case studies of physics and the life sciences and within an original conceptual framework for philosophical analysis of the processes functions and structures of scientific knowing Pandit's contributions deserve thoughtful examination For our part we wish to point to some among them 1 an interactive articulation of subjective and objective factors of both problems and theories in the course of scientific development 2 a striking contrast between the explanatory power of a scientific theory and its resolving power i e

Scientific Irrationalism Davie Stove, 2024-10-08 In fewer than two hundred pages David Stove leaves the well established and widely regarded edifice of the academic philosophy of science in smoldering ruins This book provides a modern history of scientific reasoning from David Hume's inductive skepticism to Karl Popper's outright denial of induction to the increasingly irrational and absurd scientific views that followed When Popper untethered science from induction Stove argues he triggered a postmodernist nightmare of utter nonsense culminating in Paul Feyerabend's summation that anything goes when it comes to defining or describing science With undeniable logic a deft analysis of the linguistic slight of hand that make absurd arguments seem reasonable and regular displays of wit Stove gives the reader a front row seat to one of the greatest unforced errors in the history of modern thought Stove's views are entirely consistent with the origins of scientific inference and logic as well as modern advances in probability theory and yet

he remains largely unnoticed by most of the academic world From Stove s insider outsider perspective the train wreck that is academically accepted philosophy of science and science studies is a fascinating and thoroughly entertaining subject of study Scientific Irrationalism is the perfect place to begin any examination of what science is and what it is not **Transforming**

Teacher Education Through the Epistemic Core of Chemistry Sibel Erduran,Ebru Kaya,2019-06-10 This book synthesizes theoretical perspectives empirical evidence and practical strategies for improving teacher education in chemistry Many chemistry lessons involve mindless cookbook activities where students and teachers follow recipes memorise formulae and recall facts without understanding how and why knowledge in chemistry works Capitalising on traditionally disparate areas of research the book investigates how to make chemistry education more meaningful for both students and teachers It provides an example of how theory and practice in chemistry education can be bridged It reflects on the nature of knowledge in chemistry by referring to theoretical perspectives from philosophy of chemistry It draws on empirical evidence from research on teacher education and illustrates concrete strategies and resources that can be used by teacher educators The book describes the design and implementation of an innovative teacher education project to show the impact of an intervention on pre service teachers The book shows how by making use of visual representations and analogies the project makes some fairly abstract and complex ideas accessible to pre service teachers **Kuhn's Intellectual Path** K. Viacheslav Semenovitch Stepin,2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures **The Idea of Social Structure** Lewis A.

sociology of knowledge and science planning communities medical education relative deprivation everyday life political roles and communication media This is a powerful sourcebook for understanding the work of Merton and of his intellectual successors Nisbet called the decade of the 1930s among the most vital and creative periods in American history It was certainly a period of intense struggle political military and ideological But the formation of modern sociology was without question one of the crowning achievements in the scientific evolution of the century The volume is sharply focused on Merton's work and deeply appreciative of the nature of his contribution It is a landmark effort in the study of sociology as history
