Recent Developments in Alcoholism Marc Galanter,1987 From the President of the Research Society on Alcoholism In recent years increasingly convincing evidence in support of a biobehavioral conceptual model of the etiology of alcoholism has emerged In this model the disorder is perceived as arising from the interaction of genetic/biological vulnerability and psychosocial risk Drinking or alcohol seeking is a metric trait Alcoholism which is a state of abnormally intense alcohol seeking behavior that over time leads to the alcohol dependence syndrome lies at the extreme high end of this quantitative measure Metric traits are influenced by multiple genes the extent of genetic loading of biological risk for alcoholism would be different in different individuals Added to this kind of variability is the wide range of options for exposure to the psychosocial risk factors of heavy drinking provided by modern society Further environmental provocation also changes when life events change It is not surprising therefore from the combination of the kinds of genetic and environmental variability described above that there is a wide array of patterns of expression of the disorder alcoholism referred to by some as alcoholisms In the search for understanding of underlying mechanisms and rational bases for potential therapy it is important to focus our attention on the final common pathway of this disorder alcohol seeking behavior This series ever since its beginning in 1983 has been sensitive to the complexities of the interaction between biological and psychosocial risk factors in alcoholism

Hidden Addictions Marilyn Freimuth,2009-03-19 Media portrayals and diagnostic criteria convey an image of an addicted person as someone whose deficient coping skills and severely compromised functioning are readily apparent Yet addictions remain some of the most frequently missed diagnoses in health and mental health care settings This occurs in large part because most people with addictions do not fit the stereotype In the context of psychotherapy the typical patient with an addiction will present depression anxiety marital problems or a general sense that life is not working This book addresses how addictions can be recognized more often and accurately assessed in the context of psychotherapy Along with learning about the standard assessment instruments the reader is introduced to methods for asking the appropriate questions and listening to the clinical dialogue for signs of a undisclosed addiction This book provides a great deal of knowledge about addictions and their assessment in a way that is relevant to clinical practice
