Building Predictive Human Performance Models of Skill Acquisition in a Data Entry Task, 2006 This paper presents a predictive model of a simple but important data entry task The task requires participants to perceive and encode information on the screen locate the corresponding keys for the information on different layouts of the keyboard and enter the information Since data entry is a central component in most human machine interaction a predictive model of performance will provide useful information that informs interface design and effectiveness of training We created a cognitive model of the data entry task based on the ACT R 5 0 architecture The same model provided good fits to three existing data sets which demonstrated the effects of fatigue with prolonged work repetition priming depth of processing and the suppression of subvocal rehearsal The model also makes predictions on how performance deteriorates with different delays after training how different amounts of rehearsal during training affect retention and how re training helps retention of skills

Learning and Memory of Knowledge and Skills Alice F. Healy, Lyle E. Bourne, 1995 By analyzing the results of experiments that use a wide variety of training tasks including those that were predominantly perceptual cognitive or motoric this volume answers such questions as Why do some people forget certain skills faster than others What kind of training helps people retain new skills longer Inspired by the work of Harry Bahrick and the concept of permastore the contributors explore the Stroop effect mental calculation vocabulary retention contextual interference effects autobiographical memory and target detection They also summarize an investigation on specificity and transfer in choice reaction time tasks In each chapter the authors explore how the degree to which reinstatement of training procedures during retention and transfer tests accounts for both durability and specificity of

training Researchers and administrators in education and training will find important implications in this book for enhancing the retention of knowledge of skills You have to read this book Anyone interested in training will want to read it This book provides the theoretical bases of the acquisition of durable skills for the next decade It advances and demonstrates a new principle of skill learning that will prove to be as important as the encoding specificity principle and its corollary the principle of transfer appropriate processing This new principle is that highly practiced skill learning will be durable when the retention test embodies the procedures employed during acquisition This principle and the other important findings reported in this text will have a great impact on the evolution of memory theory and on the wide range of applications Douglas Hermann University of Maryland *International Encyclopedia of Ergonomics and Human Factors - 3 Volume Set* Informa Healthcare, Waldemar Karwowski, 2006-03-15 The previous edition of the International Encyclopedia of Ergonomics and Human Factors made history as the first unified source of reliable information drawn from many realms of science and technology and created specifically with ergonomics professionals in mind It was also a winner of the Best Reference Award 2002 from the Engineering Libraries **Beyond the Learning Curve** Craig Speelman, Kim Kirsner, 2005-10-13 For years now learning has been at the heart of research within cognitive psychology How do we acquire new knowledge and new skills Are the principles underlying skill acquisition unique to learning or similar to those underlying other behaviours Is the mental system essentially modular or is the mental system a simple product of experience a product that inevitably reflects the shape of the external world with all of its specialisms and similarities This new book takes the view that learning is a major influence on the nature of the processes and representations that fill our minds Throughout the authors review and consider the areas of skill acquisition and lexical representation to illustrate the effects that practice can have on cognitive processes They also draw parallels between theories in physical and biological domains to propose not only a new theory of mental function but also demonstrate that the mind is essentially subject to the same natural laws as the physical world In so doing Speelman and Kirsner present a new perspective on psychology one that identifies universal principles underlying all behaviours and one which contrasts markedly from our current focus on highly specific behaviours Accessibly written *Beyond the Learning Curve* is a thought provoking and challenging new text for students and researchers in the cognitive sciences

also act as an essential reference for training learning professionals and instructional designers to design research based training curriculum to develop the skills of their staff Chapter 1 of the book elaborates on how the processes of learning skill acquisition and expertise development are interwoven Chapter 2 presents a classification system to categorize various models reviewed in the literature under five groups Chapter 3 describes twelve models of skill and expertise acquisition which are represented in the form of stages used frequently in learning training and performance literature The chapter also briefly discusses each model s implications toward developing the skills and expertise of a less proficient individual to a higher level of proficiency Chapter 4 reviews practice time or task based models which are theories or models suggesting that acquisition of knowledge skills development of expertise and performance improvement is a function of nature of the practice amount of time spent on the task and task type Chapter 5 presents the factor based models suggesting the interplay of several factors that influence the acquisition of knowledge skills development of expertise and performance improvement Chapter 6 embarks on describing expert modeling based models suggesting modeling an expert through elicitation or guidance for the acquisition of knowledge skills development of expertise and performance improvement Chapter 7 covers some newer movements toward cognition based models which are theories or models focusing on mechanisms of cognitive learning for the acquisition of knowledge skills development of expertise and performance improvement Chapter 8 concludes the book by integrating views from various thought leaders to explain a famous staged skill acquisition model
