Ancient Skies David H. Kelley, Eugene F. Milone, 2011-02-16 Exploring Ancient Skies brings together the methods of archaeology and the insights of modern astronomy to explore the science of astronomy as it was practiced in various cultures prior to the invention of the telescope The book reviews an enormous and growing body of literature on the cultures of the ancient Mediterranean the Far East and the New World particularly Mesoamerica putting the ancient astronomical materials into their archaeological and cultural contexts The authors begin with an overview of the field and proceed to essential aspects of naked eye astronomy followed by an examination of specific cultures The book concludes by taking into account the purposes of ancient astronomy astrology navigation calendar regulation and not least the understanding of our place and role in the universe Skies are recreated to display critical events as they would have appeared to ancient observers events such as the supernova of 1054 A D the lion horoscope and the Star of Bethlehem Exploring Ancient Skies provides a comprehensive overview of the relationships between astronomy and other areas of human investigation It will be useful as a reference for scholars and as a text for students in both astronomy and archaeology and will be of compelling interest to readers who seek a broad understanding of our collective intellectual history *Observing the Sun* Peter O.

Taylor, 1991-11-21 Observing the Sun is one of the most interesting and rewarding facets of astronomy to which amateurs can contribute Few areas of science offer as many opportunities to contribute meaningful data It is the one branch of astronomy that requires only modest equipment and can be pursued during the day Peter Taylor is a keen and highly experienced observer of the Sun In this book he explains in a clear and practical way everything that a telescope user needs to know in order to make solar observations The author draws on his many years of personal experience as a contributor to the Solar Division of the American Association of Variable Star Observers and to the American Sunspot Program The book deals with the following topics historical background choice of equipment for the safe conduct of solar observations observations of sunspots and reporting observations New techniques such as electronic recording and the operations of radio telescopes are included The level of presentation is understandable to anyone with basic astronomical knowledge and some experience in handling a small telescope **Observing Comets, Asteroids, Meteors, and the Zodiacal Light** Stephen J.

Edberg, David H. Levy, 1994-10-06 When can you see fireballs and who should you contact if you spot one When is it best to hunt for comets and meteors and whereabouts How do you gauge the size of the coma in the head of a comet and estimate its degree of condensation Clear and easy to use this guide shows you how to make successful and valuable observations and records of comets asteroids meteors and the zodiacal light For each topic the historical background and current scientific understanding support a wealth of observational techniques Comet observers are shown techniques for search and discovery They can learn how to make visual estimates of brightness and size and how to make photographic studies of cometary heads and tails Asteroid hunters will find a life list of quarry and guidelines on how to search for these objects and then how to photograph or electronically image them Fruitful photographic and electronic methods for studying meteors and meteor showers are provided Visual and photographic techniques show you how to examine the often elusive zodiacal light The more adventurous are provided with advanced techniques on how to make successful astrometric spectroscopic and electronic observations This is rounded off with an invaluable list of centres world wide to contact with your details of unusual sightings
