Technical Note, 1958 **A Nonlinear Theory for Predicting the Effects of Unsteady Laminar, Turbulent, Or Transitional Boundary Layers on the Attenuation of Shock Waves in a Shock Tube with Experimental Comparison** Robert L. Trimpi, Nathaniel B. Cohen, 1958 The linearized attenuation theory of NACA Technical Note 3375 is modified in the following manner: a) an unsteady compressible local skin friction coefficient is employed rather than the equivalent steady flow incompressible coefficient; b) a nonlinear approach is used to permit application of the theory to large attenuations and c) transition effects are considered. Curves are presented for predicting attenuation for shock pressure ratios up to 20 and a range of shock tube Reynolds numbers. Comparison of theory and experimental data for shock wave strengths between 1.5 and 10 over a wide range of Reynolds numbers shows good agreement with the nonlinear theory evaluated for a transition Reynolds number of 2.5 million **Technical Note - National Advisory Committee for Aeronautics** United States. National Advisory Committee for Aeronautics, 1958 *Flora of the Santa Cruz Mountains of California* John H. Thomas, 1991-05-01 The Santa Cruz Mountains, an area covering almost 1,400 square miles from San Francisco southward to the Monterey County line, are a part of the Coast Range of Central California. The mountains and the adjacent lowlands have a rich vascular flora and about 1,800 species, subspecies, varieties, forms, and hybrids of ferns, conifers, and flowering plants distributed among 168 families have been reported from the region. This comprehensive flora, the first of the area, is designed for use by both the serious beginner and the trained botanist. The flora is illustrated by 250 line drawings and ten photographs. In addition, there is a map of the Santa Cruz Mountains area and a stratigraphic profile of the rock formations. The stratigraphic profile and a section on geology have been contributed by Dr. Earl E. Brabb of the United States Geological Survey. Distributional notes, keys to families, genera, and species, pertinent synonymy, a glossary of technical terms, an index of place names, and common and scientific name indexes form the body of the text. The Introduction contains a description of the geography of the Santa Cruz Mountains and adjacent lowlands, sections on the geology and climate, a brief discussion and analysis of the vegetation and floristic affinities of the area, and a history of past botanical collecting. He has outlived his great love Rhalina and is tormented by voices in his dreams: a crowd of shadowy figures chanting his name. Unable to ignore their calls for help any longer, he will travel through eons of time to an age of tragedy where the people of Tuha-na-Cremm-Croich, descendants of Rhalina, are persecuted by the giant gods of the Cold Folk.
