Strings Branes And Extra Dimensions Tasi 2001 Boulder Colo Usa 429 June 2001:

Strings, Branes and Extra Dimensions Steven Scott Gubser, J. D. Lykken, 2004 This book covers some recent advances in string theory and extra dimensions. Intended mainly for advanced graduate students in theoretical physics, it presents a rare combination of formal and phenomenological topics based on the annual lectures given at the School of the Theoretical Advanced Study Institute 2001 OCo, a traditional event that brings together graduate students in high energy physics for an intensive course of advanced learning. The lecturers in the School are leaders in their fields. The first lecture by E DOCO Hoker and D Freedman is a systematic introduction to the gauge/OCogravity correspondence focusing in particular on correlation functions in the conformal case. The second by L Dolan provides an introduction to perturbative string theory including recent advances on backgrounds involving Ramond-Ramond fluxes. The third by S Gubser explains some of the basic facts about special holonomy and its uses in string theory and M theory. The fourth by J Hewett surveys the TeV phenomenology of theories with large extra dimensions. The fifth by G Kane presents the case for supersymmetry at the weak scale and some of its likely experimental consequences. The sixth by A Liddle surveys recent developments in cosmology particularly with regard to recent measurements of the CMB and constraints on inflation. The seventh by B Ovrut presents the basic features of heterotic M theory including constructions that contain the Standard Model. The eighth by K Rajagopal explains the recent advances in understanding QCD at low temperatures and high densities in terms of color superconductivity. The ninth by M Sher summarizes grand unified theories and baryogenesis including discussions of supersymmetry breaking and the Standard Model Higgs mechanism. The tenth by M Spiropulu describes collider physics from a survey of current and future machines to examples of data analyses relevant to theories beyond the Standard Model. The eleventh by M Strassler is an introduction to supersymmetric gauge theory focusing on Wilsonian renormalization and analogies between three and four dimensional theories. The twelfth by W Taylor and B Zwiebach introduces string field theory and discusses recent advances in understanding open string tachyon condensation. The thirteenth by D Waldram discusses explicit model building in heterotic M theory emphasizing the role of the E8 gauge fields. The written presentation of these lectures is detailed yet straightforward and they will be of use to both students and experienced researchers in high energy theoretical physics for years to come. The proceedings have been selected for coverage in OCo Index to Scientific Technical Proceedings, ISTP CDROM version, ISI Proceedings, OCo CC Proceedings, OCo Engineering Physical Sciences.

Strings, Branes, and Gravity Shamit Kachru, Eva Silverstein, 2001 Many of the topics in this book are outgrowths of the spectacular new understanding of duality in string theory which emerged around 1995. They include the AdS/CFT correspondence and its relation to holography, the matrix theory formulation of M theory, the structure of black holes in string theory, the structure of D-branes and M-branes and detailed development of dualities with N=1 and N=2 supersymmetry. In addition, there are lectures covering experimental and phenomenological aspects of the Standard Model and its extensions.

and discussions on cosmology including both theoretical aspects and the exciting new experimental evidence for a non zero cosmological constant
