Durability Analysis of Structural Composite Systems Albert H. Cardon, 1996-01-01 Durability analysis can be defined as the prediction methodology of safe residual behaviour after a given life time under a complex mechanical loading history in combination with a program of environmental variations This was and is a central problem for the reliability of structural components whatever are the basic material systems With composite systems combination of different materials in interaction an integrated material structure design becomes possible If one of the phases is a polymer the composite system has time dependent properties and as consequence durability analysis has to be performed taking into account the internal time factor in combination with strong influences

from temperature changes and moisture diffusion Insurance companies need information on durability and reliability in order to cover the risks and in the event of failure lawyers have to arrive at an agreement on the responsibilities of the different actors involved in the construction This book is an overview of the state of the different aspects of safe structural integrity for a given lifetime of composite structures with special emphasis on polymer matrix composites It is of interest for scientists and engineers involved in composites and for designers of composite structural components
