Cell Dynamics M. Tazawa, 2012-12-06 **Scientific and Technical Aerospace Reports**, 1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Biological Chemistry Hoppe-Seyler, 1987 *Index Medicus*, 2001 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings *Applied Mechanics Reviews*, 1988 Technical Abstract Bulletin, 1980 Hemichannels; from the molecule to the function Mauricio Antonio Retamal, Juan C Saez, 2015-04-17 Coordinated cell interactions are required to accomplish several complex and dynamic tasks observed in several tissues Cell function may be coordinated by cell to cell communication through gap junctions channels GJCs These channels are formed by the serial docking of two hemichannels which in turn are formed by six protein subunits called connexins Cxs It is well known that GJCs are involved in several functions such as intercellular propagation of calcium waves spread of electrotonic potentials and spatial buffering of ions and metabolites On the other hand undocked hemichannels which are not forming GJCs can also serve other functions as free hemichannels Currently it is recognized that undocked hemichannels may have functional relevance in cell physiology allowing diffusional exchange of ions and small molecules between intra and extra cellular compartments Additionally another family of proteins calls pannexins Panx also forms functional hemichannels at the plasma membrane Recently Panx hemichannels have been involved in both pathological and physiological processes Controlled hemichannel opening allows the release of small signaling molecules including ATP glutamate NAD adenosine cyclic nucleotides PGE₂ They also allow uptake of relevant signaling molecules e g cADPR and metabolites e g glucose Additionally a growing body of evidence shows that hemichannels are involved in important processes such glucose detection in tanocytes activation of the inflammasome memory consolidation in the basolateral amygdala potentiation of muscle contraction and release of nitric oxide from endothelial cells among others However hemichannels can also play an important role in the homeostatic imbalance observed in diverse chronic diseases In fact massive and or uncontrolled hemichannel opening induces or accelerates cell death in several pathological conditions including Charcot Marie Tooth disease ischemia oculodentodigital dysplasia hydrotic ectodermic dysplasia inflammatory responses and deafness Hemichannel mediated cell death is due mainly to an entry of Ca²⁺ The latter activates proteases nucleases and lipases causing irreversible cell damage An increasing amount of evidence demonstrates that blockade of uncontrolled hemichannel opening greatly reduces the cellular damage observed in several chronic diseases models Therefore Cx and Panx hemichannels appear as promising drug targets for clinical treatment of human chronic diseases Therefore pharmacological tools are urgently needed to further elucidate hemichannels functions and to validate them as drug targets for the development of novel therapies for connexin based diseases Thus understanding the role of Cx and Panx hemichannels under physiological conditions and recognizing the molecular mechanisms controlling them may provide us

with a better picture of the hemichannels participation in some diseases and of the signals underlying their malfunctioning
