The Porphyrins V4 David Dolphin, 2012-12-02 The Porphyrins Volume IV Physical Chemistry Part B focuses on the physical chemistry of porphyrins their precursors catabolic derivatives and related compounds The book covers nuclear magnetic resonance NMR spectroscopy of diamagnetic and paramagnetic porphyrins and electron nuclear double resonance ENDOR spectroscopy of chlorophylls and related systems It also encompasses electron spin resonance ESR spectroscopy of porphyrin pi cations and anions porphyrin excited states metalloporphyrins hemoproteins and hemes This volume is organized into nine chapters and begins with an overview of NMR theory and the use of NMR spectroscopy to study diamagnetic porphyrins and paramagnetic metalloporphyrins The discussion then shifts to the theory of ENDOR spectroscopy and the application of ENDOR spectroscopy to analysis of chlorophylls ESR of pi cations and anions of porphyrins as well as porphyrin excited states and electron paramagnetic resonance and Mossbauer spectra of hemoproteins The reader is also introduced to ESR and the electronic structure of metalloporphyrins A chapter on Mossbauer spectroscopy of iron porphyrins concludes the book This book is a valuable resource for inorganic organic physical and biochemists interested in the physical chemistry of porphyrins Transition Metal Complexes — Structures and Spectra, 2007-12-13

Organometallic Chemistry Volume 9 Edward W. Abel, Annotation Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *21st Century Challenges in Chemical Crystallography I* D. Michael P. Mingos, Paul R.

Raithby, 2021-01-20 This volume summarises recent developments and possible future directions for small molecule X ray crystallography It reviews specific areas of crystallography which are rapidly developing and places them in a historical context The interdisciplinary nature of the technique is emphasised throughout It introduces and describes the chemical crystallographic and synchrotron facilities which have been at the cutting edge of the subject in recent decades The introduction of new computer based algorithms has proved to be very influential and stimulated and accelerated the growth of new areas of science The challenges which will arise from the acquisition of ever larger databases are considered and the potential impact of artificial intelligence techniques stressed Recent advances in the refinement and analysis of X ray crystal structures are highlighted In addition the recent developments in time resolved single crystal X ray crystallography are discussed Recent years have demonstrated how this technique has provided important mechanistic information on solid state reactions and complements information from traditional spectroscopic measurements The volume highlights how the prospect of being able to routinely watch chemical processes as they occur provides an exciting possibility for the future Recent advances in X ray sources and detectors that have also contributed to the possibility of dynamic single crystal X ray diffraction methods are presented The coupling of crystallography and quantum chemical calculations provides detailed information about electron distributions in crystals and has resulted in a more detailed understanding of chemical bonding The volume will be of interest to chemists and crystallographers with an interest in the synthesis characterisation and physical and catalytic properties of solid state materials Postgraduate students entering the field will benefit from a historical introduction to the subject and a description of those techniques which are currently used Since X ray crystallography is used so widely in modern chemistry it will serve to alert senior chemists to those developments which will become routine in coming decades It will also be of interest to the broad community of computational chemists who study chemical systems
