Structure and Structure Development of Al-Zn Alloys H. Löffler, Hans Löffler, 1995-05-09 Age hardenable aluminium based alloys have several favourable properties e g high electrical conductivity and good strength with respect to their fairly low density Among them the Al Zn system is particularly suitable for studying phase transformations in supersaturated solid solutions from both the technological and the physical point of view The decomposition processes in the Al Zn system have been studied by many authors over the last three decades Thus a huge amount of information concerning the behaviour and properties of Al Zn alloys is available which can hardly be overlooked The authors of this book present a well structured summary of this knowledge For better understanding of the processes proceeding in Al Zn alloys some general features of binary Al alloys as well as a few theoretical aspects of metal physics are given as introducing chapters The closing chapter presents interesting new developments af Al based materials
