Structure Of Language And Its Mathematical Aspects Proceedings 012:

Structure of Language and Its Mathematical Aspects, 1961 *Functional and Logic Programming* Jeremy Gibbons, Dale Miller, 2024-05-16 This book constitutes the proceedings of the 17th International Symposium on Functional and Logic Programming FLOPS 2024 held in Kumamoto Japan in May 2024 The 15 papers presented in this volume were carefully reviewed and selected from 28 submissions The scope includes all aspects of the design semantics theory applications implementations and teaching of declarative programming FLOPS specially aims to promote cross fertilization between theory and practice and among different styles of declarative programming Head-Driven Phrase Structure Grammar Stefan Müller, Anne Abeillé, Robert D. Borsley, Jean-Pierre Koenig, 2024-11-07 Head Driven Phrase Structure Grammar HPSG is a constraint based or declarative approach to linguistic knowledge which analyses all descriptive levels phonology morphology syntax semantics pragmatics with feature value pairs structure sharing and relational constraints In syntax it assumes that expressions have a single relatively simple constituent structure This volume provides a state of the art introduction to the framework Various chapters discuss basic assumptions and formal foundations describe the evolution of the framework and go into the details of the main syntactic phenomena Further chapters are devoted to non syntactic levels of description The book also considers related fields and research areas gesture sign languages computational linguistics and includes chapters comparing HPSG with other frameworks Lexical Functional Grammar Categorical Grammar Construction Grammar Dependency Grammar and Minimalism **Natural Language Processing in Artificial Intelligence—NLP in AI 2020** Roussanka Loukanova, 2021-03-25 This book covers theoretical work applications approaches and techniques for computational models of information and its presentation by language artificial human or natural in other ways Computational and technological developments that incorporate natural language are proliferating Adequate coverage encounters difficult problems related to ambiguities and dependency on context and agents humans or computational systems The goal is to promote computational systems of intelligent natural language processing and related models of computation language thought mental states reasoning and other cognitive processes *Logic and Algorithms in Computational Linguistics 2021 (LACompLing2021)* Roussanka Loukanova, Peter LeFanu Lumsdaine, Reinhard Muskens, 2023-03-11 This book assesses the place of logic mathematics and computer science in present day interdisciplinary areas of computational linguistics Computational linguistics studies natural language in its various manifestations from a computational point of view both on the theoretical level modeling grammar modules dealing with natural language form and meaning and the relation between these two and on the practical level developing applications for language and speech technology It is a collection of chapters presenting new and future research The book focuses mainly on logical approaches to computational processing of natural language and on the applicability of methods and techniques from the study of formal languages programming and other specification languages It presents work from other approaches to linguistics as well

especially because they inspire new work and approaches

,1961 **AI Aspects in Reasoning, Languages, and Computation** Adam Grabowski,Roussanka Loukanova,Christoph Schwarzweller,2020-03-17 This book builds on decades of research and provides contemporary theoretical foundations for practical applications to intelligent technologies and advances in artificial intelligence AI Reflecting the growing realization that computational models of human reasoning and interactions can be improved by integrating heterogeneous information resources and AI techniques its ultimate goal is to promote integrated computational approaches to intelligent computerized systems The book covers a range of interrelated topics in particular computational reasoning language syntax semantics memory and context information The respective chapters use and develop logically oriented methods and techniques and the topics selected are from those areas of logic that contribute to AI and provide its mathematical foundations The intended readership includes researchers working in the areas of traditional logical foundations and on new approaches to intelligent computational systems *Associations' Publications in Print* ,1981 1981 in 2 v v 1 Subject index v 2 Title index Publisher title index Association name index Acronym index Key to publishers and distributors abbreviations

Beyond Aspectual Semantics Astrid De Wit,Frank Brisard,Carol Madden-Lombardi,Michael Meeuwis,Adeline Patard,2024-03-08 This volume brings together insights from leading scholars in the field of grammatical aspect to examine the multifaceted nature of this pivotal linguistic resource used to express temporal meaning The contributors explore the many ways in which linguistic research can move beyond canonical semantic analyses of aspect which still focus to a great extent on objective temporal features of what can be called situation models i e integrated cognitive representations of designated states of affairs The chapters in this volume widen this outlook by concentrating on less typical contexts in which aspectual constructions are used e g for affective purposes to mark the epistemic status of situations or to shape narrative structures This focus on non prototypicality is also reflected in the languages investigated many of which are understudied with respect to their aspectual constructions including several African languages and the sign language Kata Kolok The volume adopts a multidisciplinary methodological approach and introduces possible directions for future research based on experimental studies fieldwork research and translation mining Resources in Education ,1997
