Structure Of Phototrophic Prokaryotes:

Structure of Phototrophic Prokaryotes John F. Stolz, 1990-11-27 This book provides an in depth review of the ultrastructure of the phototrophic bacteria and how electron microscopy is used in the study of light harvesting antennae and reactions centers as well as ecology Topics discussed include detailed methods and models for the three basic types of photosynthetic apparatus The thylakoid cyanobacteria intracytoplasmic chromatophore membrane purple bacteria and chlorosome green bacteria models are presented based on ultrastructural studies including ultra thin sections 3 D reconstruction of thick sections freeze fracture replicates and immunolabeling The book also explains how species of phototrophic bacteria can be identified in natural populations by their ultrastructure Structure of Phototrophic Prokaryotes will be an invaluable reference resource for researchers and students working in photosynthesis and microbial ecology

Molecular Biology of Membrane-Bound Complexes in Phototrophic Bacteria Gerhart Drews, Edwin A. Dawes, 2013-11-27 A selection of 56 papers from a symposium in Breisgau Germany in August 1989 Treats the structure and regulation of genes coding for pigment binding membrane proteins and enzymes for bacteriochlorophyll carotenoid and cytochrome synthesis under the control of oxygen and light gradients Discussions of the composition structure organization Cytochrome Complexes: Evolution, Structures, Energy Transduction, and Signaling William A. Cramer, Toivo Kallas, 2016-06-14 An Introduction that describes the origin of cytochrome notation also connects to the history of the field focusing on research in England in the pre World War II era The start of the modern era of studies on structure function of cytochromes and energy transducing membrane proteins was marked by the 1988 Nobel Prize in Chemistry given to J Deisenhofer H Michel and R Huber for determination of the crystal structure of the bacterial photosynthetic reaction center An ab initio logic of presentation in the book discusses the evolution of cytochromes and hemes followed by theoretical perspectives on electron transfer in proteins and specifically in cytochromes There is an extensive description of the molecular structures of cytochromes and cytochrome complexes from eukaryotic and prokaryotic sources bacterial plant and animal The presentation of atomic structure information has a major role in these discussions and makes an important contribution to the broad field of membrane protein structure function **Fossil and Recent Biofilms** W.E. Zavarzin, 2013-11-11 MICROBIAL BIOFILMS PROTECTIVE NICHES IN ANCIENT AND MODERN GEOMICROBIOLOGY J W Costerton and Paul Stoodley Center for Biofilm Engineering Montana State University As this book is published based on discussions of a conference that was held in 2001 it may be useful to provide an update on the most recent revelations about biofilms so that this excellent exposition of the contribution of microbial biofilms to geological processes may be placed in a modern context The importance of the contribution of microbial biofilms to global processes is only now being appreciated as it is revealed that all terrestrial surfaces are teeming with microbial life in the form of biofilm communities These communities live on soil particles in rock fissures marine and river sediments and at the very extremes of terrestrial habitats

from inside Antarctic ice to the walls of deep sea hydrothermal vents The contribution of these biofilm communities generally went unrecognized because it was the water that was where microbiologists looked for life not the surfaces although evidence of the early association of microbes with surfaces was in fact present in the fossil record Rasmussen 2000 Reysenbach and Cadý 2001 It is also revealing that biofilm formation is found in prokaryotes from the most deeply rooted branches of the phylogenetic tree in both the Archaea and Bacteria kingdoms the Korarchaeota and Aquificales respectively Jahnke et al 2001 Reysenbach et al 2000 Methods for General and Molecular Microbiology C.
