

Structured Clinical Interview for the DSM-IV Axis I Disorders (SCID PTSD Module)

First, MB, Spitzer, RL, Gibbon, M. & Williams, JB, 1996.

Description

The Structured Clinical Interview for DSM-IV Axis I Disorders (SCID-I) is a semistructured interview for making the major DSM-IV Axis I diagnoses. The instrument is designed to be administered by a clinician or trained mental health professional. Ideally, this will be someone who has had experience performing unstructured diagnostic evaluations. However, for the purposes of some research studies, non-clinician research assistants who have extensive experience with the study population in question have been trained to use the SCID. The less clinical experience the potential interviewer has had, the more training is required.

The SCID is broken down into separate modules corresponding to categories of diagnoses. Most sections begin with an entry question that would allow the interviewer to "skip" the associated questions if not met. For all diagnoses symptoms are coded as present, subthreshold, or absent. A diagnosis of PTSD is made following the PTSD diagnostic algorithm.

Sample Item

Entry question

How did you react when (trauma) happened? (were you very afraid or did you feel terrified or helpless?)

- 1=absent or false
- 2=subthreshold
- 3=threshold or true

Question B1

Now I'd like to ask you a few questions about specific ways that it may have affected you. For example: did you think about (trauma) when you didn't want to or did thoughts about (trauma) come to you suddenly when you didn't want them to?

- 1=absent or false
- 2=subthreshold
- 3=threshold or true
