It is generally recognized today that the United States has a need to contribute to the improvement of health throughout the world The need stems from the interrelationships that exist between the health of Americans and the health status of the rest of the people on Spaceship Earth Disease does not respect national boundaries and the frequency of travel and trade between countries increases each year It further relates to the opportunities found in international settings to help solve health problems more effectively and efficiently This includes the unique human resources that are found throughout the world as well as certain natural ecological conditions that cannot be duplicated in the United States The United States also has a responsibility to contribute to improved health status Our tradition of humanitarianism alone supports such a responsibility but our comparative wealth of technical and financial resources dictates a requirement to participate Modern political realities define relationships between developed and developing countries that will not allow us to isolate ourselves from the compelling health needs of a majority of the world's population *Comparative Health Systems: Differentiation and Convergence* Mark George Field,1976 **Health planning reports subject index** United States. Health Resources Administration,1979 Doing Better and Feeling Worse John H. Pannenberg,1979 **The Politics of Inflation and Economic Stagnation** Leon Lindberg,Charles S. Maier,1985-06-01 The inflation of the 1970s represented the greatest peacetime disruption of the Western economies since the Depression Even as inflation receded the recession in its wake brought more joblessness than at any time since the 1930s The governments of industrialized nations found that the economic policies they had developed since World War II no longer assured price stability or high employment What are the lessons of over a decade of economic difficulty In this conference volume which focuses on aspects of the crisis that

economists often presuppose to be beyond control the authors analyze the political and social underpinning of inflation and recession Part 1 places the economic problems of the 1970s in the historical context of postwar development and then compares economic and political science analyses of inflation Part 2 examines how rivalries between social groups affect inflationary processes One chapter draws on the history of Latin American inflation to suggest the conflicts in play Two others weigh the role of labor and industry in the formation of economic policy And another shows how rivalry between countries like rivalry between classes at home permitted inflation to rise The chapters in part 3 contest the claim that big government or big labor causes inflation Two studies emphasize that a high degree of public expenditure does not itself lead to inflation Further contributions explore the role of central banks and subject such concepts as the political business cycle to critical analysis Part 4 comprises case studies about macroeconomic policymaking in four nations Italy Germany Japan and Sweden The studies reveal what institutional attributes rendered those countries resistant to inflation or vulnerable to economic setback In the last part the editors pull together the findings and lay out the contemporary political feasibility of alternative approaches to macroeconomic management
